1.0 Introduction

1.1 Background

Fairhurst have been commissioned by SEGRO (the 'Client') to undertake a Phase I Geo-Environmental and Geotechnical Preliminary Risk Assessment with respect to the proposed development, located on a plot of land south of East Midlands Airport, Derby, approximate postcode DE74 2TN, National Grid Reference SK 46069 24972.

This report has been prepared in support of a forthcoming Development Consent Order (DCO) and Material Change Order (MCO) Applications, whereby SEGRO is proposing to develop a second phase of its East Midlands Gateway Logistics Park (EMG1). This second phase is referred to as the **EMG2 Project** and comprises the following three main components:

1. **EMG2 Works (DCO Scheme);**
2. **Highway Works (DCO Scheme); and**
3. **EMG1 Works (MCO Scheme).**

Chapter 3: Project Description (Document DCO/MCO 6.3) of the Environmental Statement describes these components in more detail.

This preliminary risk assessment report is based on the **EMG2 Works**, forming part of the DCO Application. The **EMG2 Works** Location Plan is presented as **Document DCO 2.1**.

1.2 Objective

The objectives of this report is to provide a geo-environmental preliminary qualitative risk assessment and an assessment of potential geotechnical constraints in relation to the proposed development. The above objectives are to be met by undertaking the following:

- Reviewing desk-based information on site history, geology, hydrogeology and other potential environmental sensitivities;
- Identifying potential contamination sources, pathways and receptors at the site and surrounding area, and developing an initial Conceptual Site Model;
- Assessing and evaluating the potential for unacceptable risks to site receptors via qualitative environmental risk assessment in the context of the proposed site sensitivity;
- Identifying potential geotechnical constraints to the redevelopment of the site; and,
- Recommendations for further assessment to inform the design process for the proposed redevelopment.

1.3 Limitations

This report is for the private and confidential use of the Client for whom the report is undertaken and should not be reproduced in whole or in part, or relied upon by third parties for any use whatsoever. Fairhurst accepts no duty or responsibility (including negligence) to any party other than the stated Client(s) and disclaims all liability of any nature whatsoever to any such party in respect of this report.

1.4 Sources of Information

The following information sources were utilised in the preparation of this report:

- Archaeological Desk-Based Assessment, East Midlands Gateway Phase 2, Leicestershire, June 2022. Ref. JAC8062.V2
- British Geological Survey (BGS) online viewers (geology and hydrogeology) - [REDACTED] last accessed on the 23rd May 2023;
- British Geological Survey (BGS), Geology of Britain (1:50,000 Sheet No. 141, Loughborough, Solid and Drift (published 2001). - [REDACTED] last accessed on the 23rd May 2023;
- DEFRA Magic Map - <https://magic.defra.gov.uk/MagicMap.aspx>, last accessed on the 23rd May 2023;
- Designated Sites and Habitat Report, March 2023. Ref. 10666 – Diseworth Freeport, Diseworth, FPCR Environment and Design Ltd.
- Landmark Envirocheck Report, Ref. 295995909_1_1, dated May 2022 (included as Appendix B);
- North West Leicestershire District Council consultation response received 07th June 2022 (Appendix C);
- North West Leicestershire District Council Planning Portal (<https://plans.nwleics.gov.uk/public-access/search.do?action=simple&searchType=Application>) last accessed on the 23rd May 2023; and,
- UK Radon - [REDACTED] last accessed on the 23rd May 2023;

2.0 Site Details

2.1 Site Location

The site is located south of East Midlands Airport, to the north east of the village of Diseworth and to the north-west of Junction 23a of the M1 motorway. The site has an area of approximately 100ha and currently comprises undeveloped arable land with hedgerows and trees dividing the various fields. A public byway, known as Hyam's Lane, dissects the site from south-west to north-east. Overhead power cables are present extending across the western area of the site in a north to south direction and there is also a drain in the south-eastern area of the site.

Within this report reference is made to the northern area and southern area, although this is not formally defined within the proposed development plans, it has been utilised for ease of description. The northern area there is north of Hyam's Lane, and the southern area south of Hyam's Lane.

The site is bounded to the north by Ashby Road (A453) with East Midlands Airport beyond. Donington Park Services, including a petrol station, is located immediately adjacent to the north-east. To the east lies an undeveloped parcel of land, the A42 and the M1. To the south the site is bounded by Long Holden public byway with fields situated beyond and to the south-west is the village of Diseworth, situated from adjacent.

A topographical survey is presented within Appendix A.

2.2 Proposed Development

The proposed development at the **EMG2 Works** comprises logistics and advanced manufacturing development located on the EMG2 Main Site, south of East Midlands Airport and the A453 and west of the M1 Motorway, together with an upgrade to the EMG1 substation and the provision of a community park.

The components of the proposed development at the **EMG2 Works** are presented on the **EMG2 Project Components Plan (Document DCO/MCO 2.7)**.

In order to facilitate the development, bulk earthworks in the form of cut and fill, are anticipated across the site. A maximum cut of up to c.10 m and maximum fill of up to c.15 m is proposed. It is understood that several development plateaus are to be created across the **EMG2 Works**, ranging from 66.75 m AOD in the south east to 89.00 m AOD in the north east. The **EMG2 Works** Cut and Fill Plan and Finished Levels Plan are presented as **Figure 14M.5** and **14M.6**, respectively, of **Chapter 14: Ground Conditions** of the Environmental Statement (**Document MCO/DCO 6.14M**).

2.3 Site Walkover

A site walkover by a Fairhurst Engineer was undertaken on 01st July 2022.

The below information relating to the site condition and access to the site have been obtained through this walkover as well as a review of publically available information. Site photographs are included in Appendix E.

2.3.1 Site Access

The site can be accessed by both vehicles and pedestrians from several access points. The north-eastern most field can be accessed via a layby on the A453 whilst the fields north and south

of Hyam's Lane can be accessed via several access points along its route. Furthermore, the southern fields can be accessed via 2 No. access points on Long Holden public byway, 1 No. in the south-west and 1 No. in the south-east of the site.

2.3.2 Boundaries and Surrounding Land Uses

The surrounding area is predominantly undeveloped agricultural land with the exception of a commercial / light industrial park with East Midlands Airport situated beyond, to the north of the site, Donington Park Services adjacent to the north-east of the site and residential properties with gardens and commercial businesses within Diseworth to the south-west.

2.3.3 Topography and Ground Surfacing

The topography of the site is undulating and generally falls towards the south. The site overall has a significant fall of approximately 36m from the north east (c. 90mAOD) to the south east (c. 54mAOD).

The ground cover north of Hyam's Lane comprises arable land which, at the time of Fairhurst's site visit, was used for wheat growing. Desiccated surface soils were observed across the north of the site.

Ground cover to the south of Hyam's Lane comprises arable land in which the northern most fields were used to grow wheat and the southern and south-easternmost fields were used for growing maize. A field in the south-west was also observed to not be utilised for the growing of crops with wild flowers and grasses growing. Desiccated soils were observed in the wheat fields, albeit not as frequently, whilst the maize fields were observed to be surfaced with dried clumps of soil which was not seen elsewhere on-site. Liason with the farmer indicated that green manure had been spread on the maize fields only. Field boundaries were observed to be formed with hedges and mature trees.

The presence of crops may pose as a constraint to undertaking intrusive ground investigation in specific areas of the site in certain months of the year.

2.3.4 Structures and Additional Features

No structures were noted during the walkover in the north east of the site, with exception of the telephone mast. As noted above, overhead cables traverse the western portion of the site. Reference to the Utility Connections Drawing ATS/UC22009, May 2022 indicates that these cables are 11k overhead high voltage cables.

2.3.5 Surface waters

A drainage ditch was observed extending from the south-eastern site boundary into the central-south-eastern area of the site. At the time of the walkover, the drain was observed to be dry in the southern end. Access could not be made / the drain was obscured by dense foliage along its northern extent.

An ecological survey conducted by FPCCR Environment and Design Ltd to inform their Designated Sites and Habitat Report (Ref. 10666) identified 3 No. ponds (P1-P3) on site.

Pond P1 is located in the centre of the site just north of Hyam's Lane. The pond is roughly 5 x 8m in size and is bounded by a small group of crack willow trees, lacking any aquatic vegetation.

Pond P2 is a field pond adjacent to the south side of a hedgerow between Hyam's Lane and the A453. It comprises a steep banked pond 20 x 5m in size bounded by a dense bramble scrub. The pond lacked aquatic vegetation.

Pond P3 is located adjacent to Donington Park Services and the telephone mast in the north-east of the site. It comprises a wet depression, with a small rectangular area of open water at its centre and is bounded by scattered scrub.

2.3.6 Contamination

No significant potential sources of contamination were observed visually on site during the walkover, however following liaison with the farmer of the fields north of Hyam's Lane, 2 No. infilled clay pits are situated on the northern boundary. These were reportedly infilled c.10 years prior to the Fairhurst visit and were reportedly infilled with clay and brick rubble. Furthermore, the same farmer reported a redundant diesel powered generator was once situated on the southern boundary which was used to power a World War Two (WW2) decoy site in the south-eastern area of the site. The farmer stated that it was demolished some time ago (could not provide a precise date, but assumed active during the 1940s, and removed at a later date) and was not sure exactly where it was located.

2.4 Historical Development of the Site

The historical development of the site and the surrounding area (predominantly up to 250m from the site boundary), based on Envirocheck historical mapping, has been summarised in **Table 1**. Copies of the historical maps are provided within Appendix B of this report.

Potentially contaminative land uses highlighted with bold text and all distances are approximate.

Table 1 - Summary of Historical On and Off-site Uses

Year (Scale)	On-Site Features	Off-Site Features	Map Extract (the Site Boundary is Denoted by a Pink Line)
1883 (1:10,560) 1884 (1:2,500)	The site comprises agricultural fields with a stream extending approximately north-west to south-east in the south-eastern area of the site. An arrow on the 1:10,560 indicates a southerly flow. Small ponds are also labelled in the north-east and in south-east of the site with the latter situated next to the aforementioned stream. A footpath is labelled extending onto the north-eastern corner of the site, orientated from north-east to south-west. Furthermore a drainage ditch is indicated to extend onto site from west, situated along the southern side of Hyam's Lane.	The surrounding land use is indicated to be predominantly agricultural fields . A brick yard is labelled 100m south-west of the site and small ponds are located from adjacent west, 80m and 100m east and 200m west. Diseworth Brook is noted c. 100m south west of the site at its closest point, flowing in a south and westerly direction.	 1883 1:10,560 map extract
1901 (1:10,560) 1903-1904 (1:10,560) 1903 (1:2,500)	No significant changes.	Further ponds are labelled from adjacent west and 230m north of the site.	 1903-1904 1:10,560 map extract

1921 (1:2,500) 1922 (1:10,560)	A possible pump is labelled at the pond in the north-east of the site and further small potential ponds are situated on the northern side of Hyam's Lane, in the centre of the site and in the north of the site. The latter pond has a drainage ditch indicated to extend southwards from it towards Hyam's Lane.	The brickyard 100m south-west of the site is no longer shown and a stream is labelled extending along the western site boundary, orientated approximately north to south. An arrow on the 1:10,560 mapping indicates a southerly flow.	 1922 1:10,560 map extract.
1955 (1:10,560) 1962 (1:2,500)	The small pond adjacent to the south east corner of the site is no longer labelled and assumed infilled.	An airfield is labelled from 400m north of the site in 1955 mapping. The airfield then extends to within 50m north-west of the site in the 1962 mapping.	 1955 1:10,560 map extract.

1966-1967 (1:10,560) 1967-1969 (1:2,500)	A pond is situated in the north-eastern corner of the site.	The M1 motorway was constructed from 100m east of the site which included construction of embankments. The airfield north of the site was labelled as East Midlands Airport.	 1966-1967 1:10,560 map extract.
1972-1975 (1:10,000) 1971-1974 (1:2,500)	No significant changes	Tanks are labelled from 260m north-west of the site. Two small ponds are indicated within the sports field immediately west of the south western portion of the site.	 1972-1975 1:10,000 map extract.

1980-1984 (1:2,500)	No significant changes.	A depot is labelled in the area of the tanks and is located from 250m north-west of the site. Furthermore, a possible archaeological feature known as 'Mill Mound' is situated adjacent to the south western boundary where 2 no. ponds were previously noted, and potentially subsequently infilled.	 1980-1984 1:2,500 map extract showing the south-western area of the site.
1989 (1:10,000) 1987 (1:2,500)	No significant changes.	Commercial / light industrial type buildings and a hotel are situated from 100m north of the site.	

			1987 1:2,500 map extract showing the north-eastern corner of the site.
1992-1994 (1:10,000) 1992-1993 (1:2,500)	No significant changes.	A works is labelled 190m south-west of the site. Furthermore, a junction linking the M1 to the A453 (adjacent to the northern site boundary) was constructed from adjacent north-east of the site.	 1992-1994 1:10,000 map extract.

2000 (aerial photograph)	No significant changes.	Donnington Park Service Station are situated adjacent north-east of the site and two ponds to the south of it. Commercial / light industrial buildings are present from 50m north of the site. There is evidence of potential earthworks associated with construction of the roundabout 50-100m NE of the site.	 2000 aerial photographs (NE of site)
2006 (1:10,000)	No significant changes.	No significant changes. Two man made ponds are indicated to be present adjacent to the airport.	 2006 1:10,000 map extract.

2021 (1:10.000)	No significant changes.	A sewage pumping station is situated 240m west of the site, next to the stream that extends along the western site boundary before changing direction westwards. Another sewage pumping station is present within the Donnington Park Services, 50m north-east of the site.	 2021 1:10,000 map extract.
----------------------------	--------------------------------	--	---

3.0 Geology and Hydrogeology

The British Geological Survey (BGS) 1:50,000, Sheet No. 141, Loughborough, Solid and Drift (dated 2001) and nearby historical BGS borehole records have been reviewed to provide information on the published underlying geology and ground conditions at the site.

3.1 Made Ground

Due to the absence of significant historical development on site, Made Ground deposits across the site are not anticipated to be present site wide, or of a high thickness. However, as identified in the walkover section, 2 No. infilled clay pits are potentially present on the northern boundary which were reportedly infilled c.10 years prior to the Fairhurst visit and were reportedly infilled with clay and brick rubble. The location of these pits are not recorded on aerial satellite imagery or the historical maps however, the geophysical survey included within the RPS Group Archaeological Desk-Based Assessment and conducted by Magnitude Surveys Ltd indicates the presence of potential debris within the shallow soils in 2 No. locations along the north boundary of the site.

3.2 Superficial Geology

The BGS mapping that three types of superficial deposits cover the site:

- Head deposits comprising clay, silt sand and gravel are identified surrounding the watercourse in the north-western corner of the northern field. According to BGS Lexicon, Head Deposits are a poorly sorted and poorly stratified unit which was deposited by solifluction processes;
- Glaciofluvial deposits comprising sand and gravel are identified across most of the central region in the northern portion of the site and in the north-east corner of the southern half of the site. Glaciofluvial Deposits are a general a term for sand and gravel deposited in supraglacial, englacial, subglacial and ice-marginal drainage systems. The deposit may also include beds of diamicton, silt and clay.
- Oadby Member (Diamicton Till) is identified in the north-east corner of the southern portion of the site and southern centre portion of the northern half of the site. This unit generally consists of a heterogeneous mixture of clay, sand, gravel and boulders deposited directly beneath a glacier.

3.3 Bedrock Geology

The site is underlain by sedimentary rocks belonging to the Mercia Mudstone Group, principally comprising of the Gunthorpe Member, described as 'Mudstone, red-brown, with subordinate dolomitic siltstone and fine-grained sandstone, greenish grey, common gypsum veins and nodules'. The Gunthorpe Member is typically up to 70m – 90m thick. On site, subcrops of dolomitic siltstone and the Diseworth Sandstone are recorded, the latter of which is described by the BGS as pale greenish siltstone and fine grained sandstone, typically 2-4m thick.

A number of faults are recorded on site, including two faults approximately traversing west to east near the northern boundary of the site, and c. 250m south of the site, with stratum downthrown to the south and north respectively. Approximately four faults are then indicated in a north/south and north west/south east direction, with down throw direction of west and east.

Previous Ground Investigations

The BGS online database contains records of numerous intrusive investigations in and around the site of which the ground conditions encountered by some of these investigations is summarised

below. Note, the described geology is taken directly from the logs and refer to the logging standards at the time of investigation.

Northern Site Area

Historical boreholes are not present within the site boundary, though numerous boreholes in proximity to the site are noted. Borehole SK42NE157 (~200m west of the western boundary) identified topsoil to 0.20m bgl which was underlain by soft to firm silty/very silty sandy clay to 4.80m bgl. Note, shear surfaces were noted between 2.80m bgl and 3.70m bgl which may represent faulting. Between 4.80m bgl and 8.40m bgl, very stiff silty sandy clay with rock fragments, gravel and cobbles is noted. This was underlain by competent rockhead which consisted an interbedded sequence of mudstone and siltstone to 13.0m bgl (borehole termination).

Borehole SK42NE707 (~130m east of the north-eastern corner of the site) identified similar ground condition to SK42NE157, though rockhead was noted at 2.95m bgl (81.90m AOD) which comprised of stiff clay to very weak to weak mudstone and thinly interbedded weak/moderately strong siltstone to 17.20m bgl (borehole termination).

Shallow boreholes (SK43NE158, SK42NE81, SK42NE711, SK42NE80) identified topsoil (gravelly clayey topsoil with frequent rootlets) to 0.20m bgl, which was underlain by soft to very stiff silty/silty sandy clay (with lithorelicts) to 2.80m bgl (79.65m AOD) – 5.00m bgl (79.29m AOD). SK2NE711 identified rockhead (moderately strong siltstone at 2.80m bgl (79.65m AOD).

Southern Site

Borehole SK42SE248 was openhole (no recovery) to 3.0m bgl, but identified stiff to very stiff slightly gravelly clay to 6.50m (core loss was noted between 3.90m bgl and 3.50m bgl). This was underlain by generally moderately weak (though variable from weak to moderately strong) mudstone and siltstone to 15.0m bgl (47.30m AOD). A water strike was noted at 8.00m bgl (54.20m AOD).

Borehole SK42SE155 identified topsoil to 0.10m bgl which was underlain by stiff silty clay with mudstone lithorelicts to 5.50m bgl. This was underlain by rockhead (weak to very weak mudstone) at 5.50m bgl (49.34m AOD).

EMG1 Works (MCO Scheme)

A ground investigation has previously been undertaken within and surrounding the **EMG1 Works** pertaining to the **MCO Scheme**. The 'Preliminary Ground Investigation Interpretative Report for the Zone 1 Main Development Plateau and Rail Freight Terminal' by RSK Ltd presents the findings of this investigation. This report is included as **Appendix 14J** of **Chapter 14: Ground Conditions** of the Environmental Statement (**Document MCO/DCO 14J**), and has been reviewed to inform the baseline conditions pertaining to the **EMG1 Works**.

A review of the published geology for the Logistics Park to the north indicates that similar ground conditions are anticipated on both sites with some glacial till and Head Deposits anticipated locally and bedrock of the Mercia Mudstone Group.

The geo-environmental risks were predominantly assessed as negligible following the ground investigation, albeit Ground Gas Characteristic Situation 2 was recommended for the site based on elevated flow and carbon dioxide readings, the source of which was not discussed within the report.

The report concluded the shallow pad foundations and floor slabs would likely be suitable, subject to loading and settlement tolerances and appropriate earthworks specification. Where differential

settlement was a potential concern due to cut/fill or existing variable ground conditions, ground improvement and/or piling was noted as a potential solution.

3.4 Mining and Land Instability

Information provided within the Envirocheck Report (Appendix B) indicates the following in relation to land instability at the site:

- Very low hazard for collapsible ground stability hazards;
- Generally no Hazard for shrinking and swelling clay ground stability hazards, though low hazards identified north, east and north-east of the site;
- No hazard for compressible ground stability hazards;
- Very low to no hazard for running sands ground stability hazards;
- No hazard for ground dissolution stability hazards;
- Very low to low hazard for landslide ground stability hazards; and,
- The site is not located in an area of coal-mining activity.

3.5 Hydrogeology

Information provided from the Environment Agency indicates that the bedrock deposits are classified as a Secondary B Aquifer and the superficial deposits are classified as a Secondary Undifferentiated Aquifer (Oadby Member and Head deposits) and Secondary A Aquifer (Glaciofluvial deposit).

Information provided from the Environment Agency indicates the groundwater vulnerability of the Bedrock Secondary A Aquifer is classified as High. The site is not located in a Source Protection Zone (SPZ). The site it is located within a Nitrate Vulnerable Zone.

The Envirocheck Report indicates that there are no groundwater abstraction points within 1000m of the site boundary.

3.6 Hydrology and Flooding

A drainage ditch was observed extending from the central-south-eastern area of the site to the south east corner of the site. At the time of the walkover the drain was observed to be dry in the southern end whilst access could not be made / the drain was obscured by dense foliage in the further north along its extent.

A basin was observed in the south-west of the north-easternmost field, adjacent to the telephone mast, however it appeared to be dry at the time of the site walkover.

A review of the Site Sensitivity Maps within the Envirocheck Report (Appendix B – extract provided in Plate A below) indicates the presence of the following watercourses/features:

- Small pond within the northern field – not evident on site during the walkover;
- Man-made ponds/drainage features 65m – 80m east of the site understood to be associated with the adjacent motorway services;
- A pond c. 50m west of the site – visible on satellite imagery at the end of Cheslyn Court and on historical maps from c. 2000;

- Two man made pond/drainage features c. 70m to the north adjacent to the Airport
- A pond c. 180m south west of the site.
- Inland Rivers are recorded within the Envirocheck Report as follows
 - Along the western boundary of the site, flowing in a southerly direction before flowing to the west, to eventually meet Diseworth Brook;
 - Diseworth Brook which flows in an easterly direction approximately 248m south-west of the site at its closest point;
 - A stream which issues in the south eastern portion of the site, flowing to the south eastern corner, where another tributary converges from the eastern boundary of the site, flowing south to meet Diseworth Brook; and,
 - Long Whatton Brook which flows south-west to north-east and is c. 545m south-east of site at its closest point.

Plate 1 – Site Sensitivity Map Extract (Envirocheck Report – Appendix B)

Based on the information available it is considered that groundwater flow direction is likely to be in the south to south easterly flow direction. As such, surface water receptors are largely associated with the ponds identified on site, the drainage ditch in the south east and the associated tributaries of the Diseworth Brook. Ponds to the north and south west are not considered likely receptors.

Information provided from the Environment Agency (EA) Flood Map for Planning indicates that the site is located in Flood Zone 1 (not considered to be at risk of flooding from rivers or seas up to the 1 in 1,000 year annual exceedance probability event (0.1% AEP)).

An extract of the 'Risk of Flooding from Surface Water' is presented below within Plate 2.

Plate 2 – Extent of Flooding Risk from Environment Agency

Although preliminary comment has been made in relation to flood risk base on the mapping this report does not provide formal advice on flood risk.

3.7 Mineral Safeguarding

The site is within the Mineral safeguarding Zone for the Leicestershire County Council area whereby the Leicestershire Minerals and Waste Local Plan (September 2019) has been adopted. This has been addressed under a separate cover in the Fairhurst Mineral Safeguarding Assessment, presented within **Appendix 14C** of **Chapter 14: Ground Conditions** of the Environmental Statement (**Document DCO/MCO 6.14C**).

4.0 Environmental Information

4.1 Radon

Mapping of the radon risk associated site viewed on the UK Radon website identified that the site is within an area where less than 1% of homes are affected by radon. As such it is considered that radon protection measures are not required for new structures. The information presented within the Envirocheck report confirms that the site is considered to be at very low risk of the potential negative implications of Radon, and that protection measures are not required.

It is acknowledged that the Radon Risk Maps were updated in December 2022 (Envirocheck Report dated May 2022), however a review of the freely available risk maps (<https://www.ukradon.org/information/ukmaps>), confirms the site is in an area where less than 1% of properties are above the action level, and as such radon protection measures are not required.

4.2 Ground Gas and Vapours

Due to the current condition of the site, and lack of historical development on site, extensive Made Ground soils are not anticipated across the site, nor have any sources of natural ground gas been identified based on the published geology. There is the potential for localised Made Ground deposits associated with the infilled pits noted by the farmer and to a lesser extent, historical pond features potentially infilled offsite identified within Section 2.4. Table 2 below summarises the potentially infilled land identified within the Envirocheck database report.

The Envirocheck report also records 1 waste transfer site on site (dated 1986, operated by East Midlands Airport Authority). This had had an input rate of less than 10,000 tonnes per year and the source of waste being the waste produced on site (waste included commercial waste and commercial waste of a domestic nature). Based on the site walkover and review of historical maps, there is no evidence of the associated infrastructure of a waste transfer station having been on site. It suspected that this location record may be an error and is more likely associated with the handling of airport waste, on the East Midlands Airport site to the north. Correspondence between Fairhurst and the Environment Agency as part of the statutory consultation associated with **Chapter 14: Ground Conditions (Document DCO/MCO 6.14)** of the Environmental Statement (ES) confirms that the EA regard the waste transfer station as a geo-referencing error. The data supporting this erroneous result was accepted by the EA on 22nd April 2025, and therefore it has been discounted as a potential source of contamination within Chapter 14 of the ES.

The Envirocheck report records 1 historical landfill within 500m of the site (254m NW of site). The licence holder is not known though the landfill operated from 1960 to 1970. Waste included inert, industrial, commercial and household waste.

The Envirocheck report records 1 landfill site within 500m of the site (256m NW). The type of waste and date of closure of the landfill site is not provided in the Envirocheck report.

Along with the identified infilled land during the site walkover and through the review of historical mapping, the Envirocheck report holds a number of records of potentially infilled land within 500m of the site. The records are listed in Table 2 below. The potential risk associated with these sources is considered further in the preliminary conceptual site model and qualitative risk assessment.

Table 2 Potentially Infilled Land within 500m of Site

Type	Use	Location Relative to Site	Date of Mapping
Anecdotal report of 2 clay pits.	Understood to have been backfilled with Clay and Brick Rubble.	Located in the north of the site, adjacent to the A453	Anecdotally 2010
Potentially Infilled Land (Non-Water)	Unknown Filled Ground (Pit, Quarry, etc.)	29m SW	1993
Potentially Infilled Land (Water)	Unknown Filled Ground (pond, marsh, river, stream, dock etc.)	169m NW	1922
Potentially Infilled Land (Water)	Unknown Filled Ground (pond, marsh, river, stream, dock etc.)	200m S	1955
Potentially Infilled Land (Water)	Unknown Filled Ground (pond, marsh, river, stream, dock etc.)	214m S	1955
Potentially Infilled Land (Water)	Unknown Filled Ground (pond, marsh, river, stream, dock etc.)	296m S	1955

4.3 North West Leicestershire District Council Consultation

The Contaminated Land Officer at North West Leicestershire was contacted in preparation of this report on the 25th May 2022 and a response was issued on 7th June 2022 (see Appendix C).

This response provided reference to 2 No. landfills within 500m of the site. These landfills are:

- Off Grimes Gate, Diseworth landfill (waste including inert, industrial, commercial and household). No information was provided to suggest if this is an active or historical landfill, though this landfill is not observed on satellite imagery (GR 445200, 324900); and
- Long Mere Lane, Diseworth landfill (waste including inert, commercial and household). No information was provided to suggest if this is an active or historical landfill, though this landfill is not observed on satellite imagery (GR 445000, 324100). The response from the contaminated land officer also confirmed the absence of gas on surface.
- The Local Authority confirmed the site is not classified as part 2A.

Please see Appendix C for the complete response.

4.4 Asbestos

It is expected that areas of the site will have no Made Ground, where asbestos in soil is unlikely to be encountered. Known pits have been backfilled and further unknown pits are possible, which have a higher likelihood of asbestos in soil being present. Less commonly, bulk asbestos has been known to have been buried or used on farmland.

4.5 Unexploded Ordnance (UXO)

A UXO Desk Study & Risk Assessment (document reference P11996-22-R1, Rev A, dated 25th July 2022) was produced by Zetica UXO. The report confirmed the following:

- Records indicate that 3No. High Explosives bombs fell on the site during World War Two (WWII) and explode;
- The site had 2 bombing decoys on the site;
- No other significant sources of UXO hazards have been identified on site;
- The site has a low UXO hazard level; and
- No additional measures are considered essential to reduce UXO risk on site and any proposed works (excavations, boreholes/piling) can proceed.

4.6 Invasive Species

An assessment for invasive species is outside the scope of this report.

4.7 Consented, Permitted and Other Activities

Table 3 summarises relevant information provided within the Envirocheck Report, including details of potential off-site contaminative land uses. Potential sources located at a distance greater than 250m from the site are generally discounted on the basis of distance and influence from the subject site. Migration of ground gas for instance from landfills are generally considered within a greater distance of 500m from the site.

Table 3 Summary Potential Contaminative Consents, Permits and Other Activities

Details	Location Relative to Site	Status
Waste Transfer Site (suspicion of incorrect entry)*	On Site	-
Discharge Consent – East Midlands Airport Various revoked versions. Current discharge consent: Operator: East Midlands International Airport Limited Location: East Midlands Airport Castle Donington, Derby, .., Derbyshire, De74 2sa Authority: Environment Agency, Midlands Region Catchment Area: Soar Catchment To Confluence With Kingston Brook Reference: T/57/45295/T version 3. Effective / issue Date: 24th October 2018 Discharge type: Trade Discharges - Site Drainage (Contam Surface Water, Not Tips) Discharge: Freshwater Stream/River Environment Receiving Water: Long Whatton Brook & River Trent Status: Varied under EPR 2010	47m NE	Active
Local Authority Pollution Prevention and Controls, BP Petrol Station Moto Donington Park Service Station, M1 Northbound, Petrol Filling Station	67m NE	Authorised

Details	Location Relative to Site	Status
Pollution Incidents to Controlled Waters- Oils – Diesel, including Agricultural, no adverse effects- oil spill from ruptured diesel tank on lorry (Category 3 minor incident)	26m E	-
Substantiated Pollution Incident Register, November 2002, Category 2 (significant impact on water), no impact (category 4) on air or land	195m NW	-
Historic Landfill Site	250m W	-
Notes* Discounted as a potential source of contamination within Chapter 14: Ground Conditions of the Environmental Statement (Document DCO/MCO 6.14).		

The Envirocheck report lists current potentially contaminative land uses within 500m of the site, of which those present within influencing distance of the site (250m or 500m for ground gas risk) have been considered in this report; these are presented in Table 4.

Table 4 – Summary of Contaminative Industrial Land Uses

Land Use Activity	Distance (m)	Direction
Waste transfer station (if record is accurate)*	On site	-
East Midlands Airport	47	N
Service Area (active)	67	NE
Vehicle Cleaning Service (no status given)	67	NE
Petrol Filling Station (inactive)	67	NE
Printed Circuit Services (active)	89	NE
Petrol Filling Station (active)	90	NE
Vehicle Cleaning Service (no status given)	113	NE
Petrol Filling Station (inactive)	127	NE
Petrol Filling Station (inactive)	127	NE
Distribution and Haulage (no status given)	159	N
Freight Forwarders (active)	160	N
Freight Services (inactive)	160	N
Freight Forwarders (inactive)	160	N
Distribution and Haulage (no status given)	160	N
Distribution and Haulage (no status given)	160	N
Distribution and Haulage (no status given)	160	N

Land Use Activity	Distance (m)	Direction
Notes* Discounted as a potential source of contamination within Chapter 14: Ground Conditions of the Environmental Statement (Document DCO/MCO 6.14).		

5.0 Conceptual Site Model and Qualitative Risk Assessment

An initial conceptual site model (CSM) represents the characteristics of the site that show the possible relationship between identified potential contaminant sources, pathways and receptors. The Principles of Environmental Risk Assessment are presented in Appendix F. The significance of the presence of sources, pathways and receptors is considered by carrying out a risk assessment of all potentially complete source-pathway-receptor (S-P-R) linkages.

5.1 Source Characterisation

Potential sources of contamination at the site have been established based on the site walkover, the historical map review, review of environmental information within the Envirocheck Report and taking account of local ground investigation information. **Figure 14M.1 of Chapter 14: Ground Conditions** of the Environmental Statement (**Document DCO/MCO 14M**) presents the **EMG2 Works** Potential Sources of Contamination Plan. Potential sources located more than 250m from the site are discounted on the basis of distance and influence from the subject site. The exceptions are potential sources of ground gas and / or soil vapour, such as landfill, which are considered relevant up to 500m from the site boundary. The remaining relevant potential sources are shown in Table 5.

Table 5 - Identified Potential Sources of Contamination

Potential Contamination Sources	
On-site	
Infilled Clay Pits (north of site) – Anecdotally identified based on farmers description	
Redundant diesel powered generator (now demolished) – Based on Farmers Description (suspected date, mid 1940s)	
Waste Transfer Site*	
Off-site	Location
Service Area (current)	67m NE
Vehicle Cleaning Service	67m NE, 113m NE
Petrol Filling Station (current and historical)	67m NE, 90m NE, 127m NE
Printed Circuit Services (current)	89m NE
Distribution and Haulage	159m N, 160m N
Freight Forwarders/Services	160m N
General activity on East Midlands Airport (except those noted above)	Approximately 50m N
Historical Landfill Sites	254m NW
Landfill Sites	256m NW
Potentially Infilled land (historical)	29m SW, 169m NW, 200m S, 214m S, 296m S
Notes* Discounted as a potential source of contamination within Chapter 14: Ground Conditions of the Environmental Statement (Document DCO/MCO 6.14).	

Table 5 contains the most pertinent identified potential sources of contamination based on the available data at the time of reporting.

The 'Contaminants of Concern' for those potential sources which cannot be discounted, as identified in Table 5, are listed in Table 6.

Table 6 - Contaminants of Concern for Sources Identified

Land Use	Location	Potential Contaminants
Infilled clay pits	(2no. in the North)	Asbestos, Heavy Metals, TPHs, PAHs, VOCs, SVOCs and ground gases/vapours
Former diesel generator	South of the site	Asbestos, Heavy Metals, TPHs, PAHs, VOCs, SVOCs and ground gases/vapours
Waste Transfer station*	Centre of Northern area (suspected incorrectly located)	Asbestos, Heavy Metals, TPHs, PAHs, VOCs, SVOCs and ground gases/vapours, ammonia.
Service Station, including petrol filling station, car wash.	67 – 90m North East	Asbestos, Heavy Metals, TPHs, PAHs, VOCs, SVOCs and ground gases/vapours
Various Works associated with the airport	80 – 160m North.	Asbestos, Heavy Metals, TPHs, PAHs, VOCs, SVOCs and ground gases/vapours
Historical firefighting at East Midlands Airport	Approximately 160m north	PFAS.
Historical/Current Landfill site	254m North West	Asbestos, Heavy Metals, TPHs, PAHs, VOCs, SVOCs and ground gases/vapours, ammonia,
Notes* Discounted as a potential source of contamination within Chapter 14: Ground Conditions of the Environmental Statement (Document DCO/MCO 6.14).		

The East Midlands Airport has a discharge consent to surface water. The full details are not known but the discharge consent is understood to be limited to surface water runoff. It is anecdotally known that the airport is under an enforcement notice of this permit. The Airport is on a topographical high point where the natural topography would indicate that some of the site would drain north and some south. It is not clear from the information provided, where the airport drainage outfalls.

In addition, the airport has been subject to a Regulation 61 Notice requiring them to investigate and test for PFAS and non PFAS contamination. It is understood that this investigation included desk based assessment of likely contamination and on site testing. The progress on this is not known. In relation to PFAS risk, it is considered that the airports testing and monitoring will appraise the potential for PFAS impact on the Airport and that testing for PFAS is not required in the proportional assessment of the site's suitability for it's proposed use.

5.2 Receptor Characterisation

Potential receptors at the site are related to the development proposals and the surrounding area. The location of the site relative to sensitive environmental receptors have been considered, as well as the ground and groundwater conditions at and below the site.

A review of the proposed development, as outlined within Section 2.2 of this report and presented within the **EMG2 Project** Components Plan (**Document DCO/MCO 2.7**) indicates that the site is to be utilised as a commercial space and shall contain commercial occupation, with the development of a Community Park (DCO Works No. 21 on the aforementioned Components Plan) in the western area of the **EMG2 Works**, introducing 'Public Open Space – POS' receptors. Part of the site is to be lain with hardstanding which will break direct exposure pollutant linkages (not including vapours or gas) however there are areas of soft landscaping. Therefore, it is considered that given the development proposal, the human health of on-site commercial end users and public open space users and off-site third party land users is a potential risk and will be considered in table 5 highlighting pathways of pollutants.

With the above considered, this report has identified the following potential receptors:

- Human Health: On-site staff, visitors and occasional maintenance workers, public open space users of the proposed community park; off-site; off-site commercial end-users;
- Structures: On- and off-site building fabric and services; and
- Controlled Waters: Groundwater of resource potential associated within bedrock deposits (Secondary B Aquifer) and superficial deposits (Secondary A and Secondary Undifferentiated Aquifer) beneath the site and surrounding area. The inland streams identified on and within the vicinity of the site are also potential receptors.

No statutory or non statutory designations in relation to potentially sensitive ecological receptors have been identified in relation to the redevelopment of this site. Although it is noted the site is located in a nitrate vulnerable zone. Various Non Statutory Designations are present within 1km of the site. Considering this, the site is considered to have a low sensitivity in relation to ecological receptors.

Construction workers of the proposed redevelopment are identified as potential receptors. However, it is considered that associated risks can be managed using appropriately drafted and implemented Risk Assessment Method Statements (RAMS) during the construction phase. RAMS should also include appropriate pollution prevention and control measures. The results of any ground investigation should be made available to the Principle Contractor to inform the RAMS. Construction workers will not be considered further in the qualitative risk assessment.

5.3 Pathway Characterisation

The following potential pathways relevant to the identified receptors are presented below:

On-site Human Health

- Dermal (skin) contact, ingestion and or/inhalation with contaminated soils, during construction and following completion;
- Inhalation of ground gas/soil vapours; and
- Ingress of contaminants into water supply pipes contaminating drinking water supplies, followed by ingestion.

Off-site Human health

- Ingestion and / or inhalation of windblown contaminated soils from the site, during construction and following completion;
- Inhalation of ground gas / soil vapours derived from the site where it has accumulated in buildings; and
- Ingress of contaminants into off-site water supply pipes contaminating drinking water supplies, followed by ingestion.

On-site Buildings and Services

- Ground gas and / or soil vapour migration and accumulation in voids within or beneath the proposed structures;
- Direct contact of building fabric with contaminated and/or aggressive soils or groundwater.

Off-site Buildings and Services

- Ground gas and / or soil vapour migration derived from the site and accumulation in voids within or beneath the proposed structures, followed by explosion; and,
- Off-site migration followed by direct contact of building fabric with contaminated and/or aggressive soils or groundwater.

Controlled Waters

- Leaching of contaminants from the soil to groundwater and surface water on and off-site.

5.4 Pollutant Linkages

The preliminary CSM outlined below has been used to undertake an initial assessment for the site to determine the possibility of significant risks in the context of Part IIA and environmental liability. All potential sources, pathways and receptors detailed above have been considered. The principles of environmental risk assessment are presented as Appendix F.

Table 5 – Preliminary Quantitative Risk Assessment for Identified Potential Sources of Contamination

Source	Potential Pathways	Potential Receptors	Assessment	Severity	Probability	Risk Class
Potential on-site sources (see Table 5 and Table 6)	Dermal contact / ingestion and / or inhalation of contaminated soils	On-site human health (see Section 5)	Given the commercial nature of the development, the potential harm to human health relating to the potential pathway is reduced. However given that soft landscaping is included in the development proposal (pertaining to the proposed community park and thus public open space end use), the pathway is still present.	Medium	Low Likelihood	Moderate /Low
	Inhalation of accumulated ground gases and/or soil vapours		Made Ground is anticipated across the site therefore gas risks exist on site due to the presence of infilled land/ponds. and the historical use as a waste transfer	Medium	Low Likelihood	Moderate /Low
	Permeation of water supply pipework		Contaminants with the potential to deteriorate water supply pipes and migrate into the on-site water supply may be present within the underlying soils. Due to the lack of historical investigation on site, geo-environmental lab testing of the underlying soils is recommended to confirm the above.	Medium	Low Likelihood	Moderate /Low
	Inhalation of wind-blown contaminated soils	Off-site human health (see Section 5)	Given the commercial nature of the development, the potential harm to human health relating to the potential pathway is reduced. However given that soft landscaping is included within the developed proposal (proposed community park and thus public open space end use), the pathway is still present. Risk during construction should be managed with dust suppression methods.	Medium	Unlikely	Low
	Off-site migration, followed by inhalation of accumulated ground gases and/or soil vapours		There are potential on-site sources of ground gas which could migrate off site in the unsaturated zone. However, the potential for ground gas migration may be reduced as a result of the anticipated cohesive ground conditions.	Medium	Unlikely	Low
	Permeation of water supply pipework		Groundwater is anticipated to be present at ~5-8m	Medium	Low Likelihood	Moderate/Low

Source	Potential Pathways	Potential Receptors	Assessment	Severity	Probability	Risk Class
			bgl and presents a pathway for on-site contamination to migrate off-site and come into contact with drinking water supply pipes.			
	Dermal contact / ingestion and / or inhalation of contaminated soils	Construction workers	Construction workers, in particular ground workers have the potential to be in direct contact with soils.	Mild	Likely	Moderate/Low
	Inhalation of accumulated ground gases and/or soil vapours	Construction workers	Construction workers have the potential to be impacted by hazardous ground gases in confined spaced.	Mild	Low Likelihood	Low
	Direct contact of building fabric with contaminated soils and/or groundwater	On-site building materials and services	There is potential for Made Ground/groundwater to contain contaminants and sulphates which may degrade building structures. The specification of the concrete materials which shall be utilised for the development are unknown.	Medium	Low Likelihood	Moderate/Low
	Ground gas and / or soil vapour accumulation within voids or beneath structures		There are potential sources of ground gas on site, as identified above, though further investigation is required to assess the gas risk.	Medium	Low Likelihood	Moderate/Low
	Vertical leaching and migration of contaminants from soil to groundwater and lateral leaching and migration into the adjacent source water systems	Superficial (Secondary A Aquifer and Secondary Undifferentiated) and bedrock (Secondary B) aquifers and surface water	Due to the potential presence of a shallow groundwater at roughly 5-8m bgl, a risk of contamination migration exists. However, due to a lack of groundwater data, further investigation is recommended to better understand hydrogeological conditions beneath the site. Whilst it is acknowledged that east midlands airport has been identified as potential source of PFAS, the likelihood of this having significantly migrated onto the site is low and it is under investigation separately.	Medium	Low Likelihood	Moderate/Low
	Migration of contaminants onto site followed by direct contact with building fabric	Property (on-site)	There is potential for foundations to come into direct contact with superficial/Bedrock groundwater at the site and potential associated contamination from off-site sources.	Mild	Low Likelihood	Low

Source	Potential Pathways	Potential Receptors	Assessment	Severity	Probability	Risk Class
	On-site migration onto site, followed by accumulation of ground gas / soil vapours and ignition		Made Ground and potentially Fill from surrounding development and historical infilled land, landfills, presents a source of ground gas to the site.	Medium	Low Likelihood	Moderate/Low

Risk Ratings:

- High - The available information indicates a significant possibility of harm to a receptor requiring further investigation, assessment or treatment.
- Moderate - The available information indicates a potential for significant harm to a receptor requiring further investigation and assessment.
- Low - The available information does not indicate a significant potential for harm to a receptor requiring further investigation. This does not indicate zero risk.

The preliminary risk assessment undertaken using information provided to date suggests that risks range generally from low through to moderate / low.

6.0 Geotechnical Considerations

The following potential geotechnical constraints to development may be present at the site inferred from desk based findings identified to date:

- The desk study has identified infilled ground in small areas on the site and its composition or compaction regime is not known. This gives rise to potential settlement (total and differential) risks and locally low strength soils.
- The BGS mapping indicates the presence of numerous geological faults, as described in this report. These introduces numerous geotechnical issues including introduction of pathways for water flow (including contaminated waters), fractured/poor quality rockmass leading to instabilities and potential for sudden changes in rockhead depth (due to upthrow and downthrow of fault);
- Made Ground and Superficial deposits may contain obstructions typically in the form of brick, building rubble, cobbles and boulders;
- Pyrite (sulphate 'attack') may represent a risk to the proposed building structures and foundations associated with Made Ground, groundwater and natural soils.
- Potential for a groundwater body within the near-surface superficial/bedrock which may require pumping/dewatering during an intrusive works;
- The cohesive dominant superficial deposits may represent a potential risk to the proposed development with regards to shrink swell (heave).
- There is potential for surface water flooding during heavy rainfall in the western (northern site) and south-eastern part of the southern site which may impact on site works;
- Due to the lack of site investigations on site, and the identification of 3 different type of superficial deposit from BGS mapping, there is the potential for variable strength superficial deposits underlying the site; and
- Numerous ponds have been identified on site. There is the potential for silt rich soils to be present underlying these, which may require excavation and backfilling with geotechnical suitable material in accordance with a site specific earthworks specification.

7.0 Conclusions & Recommendations

The **EMG2 Works** Desk Study indicates that based on the initial CSM and Preliminary Risk Assessment (PRA), the majority of complete pollutant linkage pathways are of **Moderate/Low or Low** risk. The PRA Preliminary Risk Assessment is conservative in its approach and therefore intrusive ground investigation is recommended in order to confirm the CSM and quantify the potential pollutant linkage risks. The ground investigation should confirm the presence/nature and extent of infilled ground, potential contamination as a result of the historical presence of a waste transfer site, the groundwater and ground gas regime and include geo-environmental soil testing to assess the potential risks to human health and the environment including confirming the presence/absence of asbestos.

During the preparation of **Chapter 14: Ground Conditions** of the Environmental Statement (**Document DCO/MCO 6.14**), the EA confirmed that the waste transfer station is a geo- referencing error. Therefore, although this was unknown at the time of the initial preliminary risk assessment and subsequent ground investigation, no further consideration has been given in the Chapter.

The Desk Study has identified potential geotechnical risks and constraints that should be further understood and addressed with consideration of the proposed specific development. On this basis a combined Geo-Environmental and Geotechnical Intrusive Ground Investigation is proposed to inform both planning / building control requirements and design considerations.

Following the ground investigation, a Phase II Interpretative Ground Investigative Report will be required to present the findings of the ground investigation, an updated CSM, and a review of the geotechnical considerations and geo-environmental risks and suitable mitigation measures.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Site of Special Scientific Interest, National Nature Reserve, Ramsar, Special Protection Area, Special Conservation Area, Marine Nature Reserve data (derived from Ordnance Survey 1:10000 raster) is provided by, and used with the permission of, Natural England who retain the copyright and Intellectual Property Rights for the data.

Scottish Natural Heritage Copyright

Contains SNH information licensed under the Open Government Licence v3.0.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England.

Natural Resources Wales Copyright Notice

Report Version v53.0

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Agency & Hydrological					
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes	Yes	n/a
Contaminated Land Register Entries and Notices					
Discharge Consents	pg 4		4	2	2
Prosecutions Relating to Controlled Waters			n/a	n/a	n/a
Enforcement and Prohibition Notices					
Integrated Pollution Controls					
Integrated Pollution Prevention And Control					
Local Authority Integrated Pollution Prevention And Control					
Local Authority Pollution Prevention and Controls	pg 6		1		1
Local Authority Pollution Prevention and Control Enforcements					
Nearest Surface Water Feature	pg 6	Yes			
Pollution Incidents to Controlled Waters	pg 6		1	1	3
Prosecutions Relating to Authorised Processes					
Registered Radioactive Substances					
River Quality	pg 7				2
River Quality Biology Sampling Points					
River Quality Chemistry Sampling Points	pg 8				1
Substantiated Pollution Incident Register	pg 8		1		
Water Abstractions	pg 9				(*1)
Water Industry Act Referrals					
Groundwater Vulnerability Map	pg 9	Yes	n/a	n/a	n/a
Groundwater Vulnerability - Soluble Rock Risk			n/a	n/a	n/a
Groundwater Vulnerability - Local Information			n/a	n/a	n/a
Bedrock Aquifer Designations	pg 13	Yes	n/a	n/a	n/a
Superficial Aquifer Designations	pg 13	Yes	n/a	n/a	n/a
Source Protection Zones					
Extreme Flooding from Rivers or Sea without Defences	pg 13		Yes	n/a	n/a
Flooding from Rivers or Sea without Defences	pg 14		Yes	n/a	n/a
Areas Benefiting from Flood Defences				n/a	n/a
Flood Water Storage Areas				n/a	n/a
Flood Defences				n/a	n/a
OS Water Network Lines	pg 14	1	27	27	31

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Waste					
BGS Recorded Landfill Sites					
Historical Landfill Sites	pg 24			1	1
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)					
Licensed Waste Management Facilities (Locations)					
Local Authority Landfill Coverage	pg 24	2	n/a	n/a	n/a
Local Authority Recorded Landfill Sites	pg 24			1	2
Potentially Infilled Land (Non-Water)	pg 24		1		2
Potentially Infilled Land (Water)	pg 25		1		1
Registered Landfill Sites					
Registered Waste Transfer Sites	pg 25	1			
Registered Waste Treatment or Disposal Sites					
Hazardous Substances					
Control of Major Accident Hazards Sites (COMAH)					
Explosive Sites					
Notification of Installations Handling Hazardous Substances (NIHHS)					
Planning Hazardous Substance Consents	pg 26				1
Planning Hazardous Substance Enforcements					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Geological					
BGS 1:625,000 Solid Geology	pg 27	Yes	n/a	n/a	n/a
BGS Estimated Soil Chemistry	pg 27	Yes	Yes	Yes	Yes
BGS Recorded Mineral Sites	pg 32				1
BGS Urban Soil Chemistry					
BGS Urban Soil Chemistry Averages					
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas			n/a	n/a	n/a
Mining Instability			n/a	n/a	n/a
Man-Made Mining Cavities					
Natural Cavities					
Non Coal Mining Areas of Great Britain				n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 32	Yes		n/a	n/a
Potential for Compressible Ground Stability Hazards	pg 32		Yes	n/a	n/a
Potential for Ground Dissolution Stability Hazards				n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 32	Yes	Yes	n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 33	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 34	Yes	Yes	n/a	n/a
Radon Potential - Radon Affected Areas	pg 36	Yes	n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a
Industrial Land Use					
Contemporary Trade Directory Entries	pg 37		8	4	2
Fuel Station Entries	pg 38		1		
Points of Interest - Commercial Services	pg 38		7	1	2
Points of Interest - Education and Health					
Points of Interest - Manufacturing and Production	pg 39		2	10	5
Points of Interest - Public Infrastructure	pg 40		9		
Points of Interest - Recreational and Environmental	pg 41		2	1	
Gas Pipelines					
Underground Electrical Cables					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Sensitive Land Use					
Ancient Woodland					
Areas of Adopted Green Belt					
Areas of Unadopted Green Belt					
Areas of Outstanding Natural Beauty					
Environmentally Sensitive Areas					
Forest Parks					
Local Nature Reserves					
Marine Nature Reserves					
National Nature Reserves					
National Parks					
Nitrate Sensitive Areas					
Nitrate Vulnerable Zones	pg 42	1			1
Ramsar Sites					
Sites of Special Scientific Interest					
Special Areas of Conservation					
Special Protection Areas					
World Heritage Sites

INFORMATION GROUP

A Landmark Information Group Service v50.0

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In 1938, a reorganisation was produced, which updated the 1:10,560 maps for a national grid. The maps were then updated, but unfinished - with all military camps and other strategic sites removed. These maps were initially overlaid with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's, in 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were produced by hand, and the maps of urban areas were produced by a county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's a Provisional Edition was produced, which outlived the 1:10,560 map as a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first revision process was initiated, and the maps were produced by computer. The revision process continued until each map was replaced with a new edition, every 10 years or so for urban areas.

Ordnance Survey Plan Published 1955

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were then used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In 1938, a national retriangulation was produced, which updated the 1:10,560 maps for a national datum. From 1948, the OS maps were unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan Published 1966 - 1967

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. The adoption of the Transverse Mercator Projection in 1938, which updated the 1:10,560 maps for a national datum, allowed for more accurate mapping, with all military camps and other strategic sites removed. These maps were initially overlaid with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan Published 1972 - 1975

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In 1948, as a co-ordination exercise, a new edition was produced, which updated the 1:10,560 maps for a national grid. This was a 'best fit' edition, which was unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping Published 2000

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depicts includes county, unitary authority, district, civil parish and constituency.

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large scale information surveyed at 1:12,500 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10,000 scale (mountain, moorland and river estuary areas).

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1886 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1974

Source map scale - 1:2,500

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Ordnance Survey Plan Published 1980

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1886 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data Published 1994

Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Additional SIMs

Published 1984 - 1992

Source map scale - 1:2,500

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Map Name(s) and Date(s)

Large-Scale National Grid Data Published 1993 - 1994 Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the forerunners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Map Name(s) and Date(s)
