Dear Planning Inspectorate,

I am writing to formally submit my objection to the proposed construction entrance on Church Lane for the Hampshire Water Transfer and Water Recycling Project. As a resident living [redacted], I have severe concerns regarding the impact of these plans.

My objections are based on the following material planning considerations:

- Highway Safety and Traffic Impact: Church Lane is already heavily congested during peak hours. Introducing heavy construction traffic (HGVs and LGVs) to this location is unsafe and unsustainable given the current road capacity, creating severe traffic bottlenecks and safety hazards.
- Residential Amenity (Noise and Vibration): The noise and vibration generated by construction vehicles directly opposite my home will significantly degrade living conditions. Furthermore, any proposed operations outside standard working hours, such as nights and weekends, are unacceptably intrusive.
- Lack of Direct Consultation: The severe disruption to nearby residents has been significantly underestimated, and there was a lack of direct consultation with those living immediately adjacent to the proposed access point. The company asked for our interests in the project but we only received data regarding the scale of the disruption now.

I urge the Inspectorate to consider alternative construction access routes that avoid residential streets, such as the Highfield Farm option proposed by the Parish Council.

Please ensure these concerns are formally logged and evaluated as part of the ongoing Development Consent Order (DCO) examination process.

Yours faithfully,

Alastair Cooper
