To whom it may concern,

I never received a letter from Southern Water about this compound, its location or the impacts on us as residents.

I therefore did not submit a relevant representation by August 2026. I ask the Examining Authority to accept this representation and to register as an Interested party.

Written representation: Construction Compound L10 and the effects on my home:

I live at [redacted] and I echo ALL of the same concerns as my immediate neighbours [redacted] and [redacted] and also [redacted].

I strongly object to the works plans (of app 014 on sheet 25) of the construction compound L10.

I do NOT think a compound of this size should be positioned so close to residential properties.

There is land opposite the proposed location which is industrial use and also land on Highbridge farm which is within a few hundred metres. Both are alternative options.

Construction traffic and road safety on the B3335:

Southern water forecasts an average of 119 light goods vehicles on the B3335 (two-way trips per day and 260 peak 2 way trips per day (for 4 months)

Southern water also forecasts 19 average two way trips per day from Heavy goods vehicles (75 peak two way trips per day for 4 months)

These works are 'predicted' to last 17 months, if not longer.

All HGV's would travel from the M3, J11 and along the B3335. This road ALREADY carries a VERY high volume of traffic, it floods regularly and there is also a 4-way staggered junction which is a known accident area.

Working hours: noise and light pollution, Bank holiday and night working:

Living on [redacted] any work outside of the proposed standard hours would adversely and directly impact on my health, wellbeing and sleep. As myself and my neighbours know all to well after experiencing years of disruption during the Southern water sewage floodings at Highbridge/Brambridge.

Yours sincerely,

Rosie Taylor -
