With the confirmed withdrawal of NGET's DCO on February 20th 2019 the Wylfa Newydd DCO is now lacking critical infrastructure

It would be helpful if the ExA could request a description of how Horizon are proposing to export power to the national grid

As I'm sure they are aware, the Horizon DCO is now failing the guidance in PA2008 in that the entire programme of development is neither contained in a single application or two applications submitted in tandem

I can only assume there is a planned "North Wales Connection II" but it would aid clarity to understand Horizon's assumptions

Without such clarity it is difficult to determine if there are further issues to bring to the attention of the ExA

Many thanks
Jonathan
