

Mike Taylor [REDACTED]

SizewellC

Further to confused messages from Sizewell C on the rebar facility and methods please note the following article received today .

This appears to call for more clarity in SZC Co plans.

[REDACTED] has hailed its industrialised construction methods used on nuclear projects as “redefining what is possible for major infrastructure projects”. In its latest report and accounts, the UK’s third-largest contractor said that an advanced rebar and reinforcement manufacturing facility in Avonmouth had halved the time workers needed to be on site at Hinkley Point C. The firm said it expected further efficiencies using these methods for the upcoming Sizewell C nuclear project, with a predicted 60% reduction in onsite hours. Laing O’Rourke is also integrating construction-specific AI tools to optimise the build sequence for Sizewell C.

*Construction Management 14th July 2026*
