

Dear Sir / Madam , After listening to the submissions at the preliminary meeting I am still very concerned with EDF's attitude to the transport planning and issues this project will cause on the A12 between Lowestoft and Wickham market and Stowmarket / tourist route. Aside from the destruction to local quality of life , destruction to the wildlife habitats , I fail to see how 6000 workers , 1000's of heavy plant vehicles , school buses , public transport, local traffic travelling to and from various places of work , holiday traffic , will make the building of a project of this scale anything but a complete fiasco. The largest construction site in Europe fed along small winding "B" roads. EDF already have form for massive over runs / delays . This will apriori be much much worse , no motorways no, major access roads just one already overstretched A road. Please see sense and reject this ridiculous project . We are a small local precision eng business based in Beccles Suffolk . I travel from Theberton to Beccles each day.If it goes ahead we're moving , no question , we could not survive the traffic chaos and business supply disruption.
. We can rebuild in another county but the jobs of the people we currently employ will not as they are local and cannot simply uproot and move.

Yours faithfully M W Youngman.
