Dear Miss McKay

Re - Issue specific geomorphology online conference today's date.

Project Name : NNB Generation Company (SZC) Limited for The Sizewell C  
My Representation registration Number: 20025524

I have been able to listen to some of today's presentation. Thank you for your professional handling of a complex meeting.

I would be extremely grateful if you could pose a direct question to Tony Dolphin (Cefas) and Ollie Burns (Environment Agency).

They have apparently suggested today that they have modelling with 'offshore wave patterns propagated inshore'. This is very important as in the DCO and the DCO Addendum all Flood Risk and shoreline change modelling is conducted with the Sizewell Dunwich banks in situ and a corresponding low inshore wave climate.

Do they now have modelling with the Sizewell-Dunwich banks removed for all Flood Risk Assessment epochs and shoreline change modelling?

This would be a very different FRA and suggest a complete new Expert Geomorphological Assessment- if so where are these data and where is the all new EGA?

Kind regards  
Nick Scarr
