The Sizewell C Project, Ref. EN010012

Issue Specific Hearing 7 (15 & 16 July 2021) – (ISH7) Biodiversity and Ecology

Post Hearing Submissions including written summary of Suffolk County Council's Oral Case

Suffolk County Council Registration ID Number: 20026012

Deadline 5 23 July 2021

Issue Specific Hearing 7 (15 July 2021) - (ISH7) Biodiversity and Ecology Post Hearing Submissions including written summary of Suffolk County Council's Oral Case

Note: These Post Hearing Submissions include a written summary of the Oral Case presented by Suffolk County Council (SCC). They also include SCC's submissions on all relevant Agenda Items, not all of which were rehearsed orally at the ISH due to the need to keep oral presentations succinct. The structure of the Submissions follows the order of the Agenda Items but within each Agenda Item, the Submissions begin by identifying the main points of concern to SCC and then turn to more detailed matters.

		Appendix 7B REP2-109
The Sizewell Marshes SSSI		
b. The Sizewell Marshes SSSI		

i. the SSSI crossing,

SCC has a preference for a three-span bridge rather than a causeway in first instance. The national policy position for impact on SSSIs is that impacts should be minimised.

EN-1, at paragraph 4.4.2, sets out that the policy for consideration of alternatives is provided in section 5.3. Paragraph 5.3.7 sets out the general principle that significant harm to biodiversity should be avoided through mitigation and consideration of reasonable alternatives. Paragraph 5.3.11 sets out a presumption of refusal with regard to proposals with adverse impacts on SSSIs, while providing an exception for cases where the benefits clearly outweigh impacts on special features.

Further, EN-6 volume II paragraph C.8.65 makes clear that the balance of impact on the SSSI is a matter for project-level assessment while paragraph C.8.63 requires the applicant to develop an ecological mitigation and management plan to minimise impacts.

In its oral submissions at ISH7 the Applicant suggested (in response to questions from the ExA) that the SSSI crossing could not be constructed at any earlier stage in order to offset the 6-12 month time difference between construction of the Applicant's causeway/culvert option and the three-span bridge option preferred by SCC (and NE and others). The Applicant proposed to put in a note at D6 to explain its position on whether the crossing could be constructed 'at risk' once a DCO had been made, and SCC will comment when such a note becomes available.

The applicant has represented in its comments to our written representations [REP3-042] that there would be a very small difference in permanent land take between the current proposal and a three span bridge. At our oral submission we asked

whether the applicant could demonstrate this by providing a comparative plan which overlays the two proposals and shows the boundaries of the SSSI. We also asked for clarification as to whether the temporary construction land take utilised additional land within the SSSI and asked for this to be identified.

We note that during the Stage 2 consultation process, as shown in [APP-072], the difference between the SSSI land take of the two options (i.e. option one and option three) in the construction phase is much larger at around one third of a hectare (see Tables 7.2 and 7.3 and Figures 7.21 to 7.24). Noting that option one has been superseded by the present causeway proposal, we would like the applicant to provide a similar comparison between option three and the present causeway.

A fair comparison should also show the improvements to the present causeway design applied to the three-span bridge such as the removal of a 15-meter wide strip of the crossing deck.

SCC notes from the Applicants response to ExQ Bio 1.47 the Applicant's intention to reduce the width of the bridge to approximately 15m once the power station has been built and their intention to submit updated indicative plans and further details at Deadline 5. SCC will review this once it has been provided by the Applicant to consider the extent to which it addresses the concerns that we raised on the proposed SSSI crossing design in our Local Impact Report at [REP1-045]. Whilst a reduction in the width of the permanent crossing is – on the face of it – a welcome positive step, we remain concerned about the impact of the much wider proposed temporary crossing on the SSSI and ecological connectivity whilst it is in place.

	While the construction period is temporary, we are concerned that because is it so long that the relevant species and communities may have difficulty recovering in the long term. This could amount to a permanent deterioration of quality for the SSSI, even for a temporary direct impact. Requirement 12C Main Development Site: SSSI crossing Notwithstanding the debate about the nature of the SSSI crossing, SCC was concerned that, through Requirement 13 in the submitted dDCO, there was no means of controlling any element of the crossing save the height of the crossing (Zone 1E in Table 2.3 of Chapter 2 of the Environmental Statement Volume 2 (APP-180)). Therefore, SCC welcomes the greater clarification of the means by which the form of the crossing may be established in the revisions included in Revision 4 of the dDCO by the addition of Requirement 12C. Owing to the fact that the Applicant is due to provide updated plans, the Council anticipates that the exact wording may need to change to reflect the contents of those plans. On a detailed matter, though, R12C has been "carved out" from R13 but the terms of the text for R13 still purports to cover Work 1A(I), the SSSI crossing.	DEDO 054
ii. fen meadow replacement, mitigation, monitoring and fallback	The Applicant has submitted baseline study to date for the proposed compensation sites at D3. With its role in discharging the requirement for Pakenham Fen Meadow R14a(1)(ii), SCC has the following concern over the lack of detail in the proposals for its development: Under Requirement 14A of the dDCO (Revision 4), SCC is to	REP3-051 REP3-052
	discharge the fen meadow plan for Work No.18 (fen meadow	

habitat, Pakenham). This has to be in general accordance with the Fen Meadow Strategy. As we understand it, this is currently shown as Appendix 2.9D of the Environmental Statement Addendum Chapter 2 Vol 3 Appendices 2.9 (AS-209). In addition, the plan is required to show landscape and planting details, water management measures and an implementation timetable. In the Local Impact Report (REP1-045), SCC raised a number of issues that required clarification on the question of the Pakenham proposals (paras 8.166 – 8.169). In addition, other Interested Parties have raised issues. We note that the ExA has brought these together in Annex B of the Rule 8(3) letter of 18 June 2021. This states:

"The issues arising are the same as for the Initial Assessment of Principal Issues (IAPIs) originally raised [PD-007] but specifically applied to the additional land. Furthermore, the following new issues arise in relation to the additional land at Pakenham (Change 11):

- The need for the land as compensatory fen meadow.
- The likelihood of successful creation of fen meadow in this location.
- Whether the extent of the land sought to be compulsorily acquired for that purpose would be excessive.
- The hydrological and flood risk implications of the proposed use of this land as fen meadow including in relation to neighbouring properties and existing ecology with particular regard to the nearby SSSI and CWS.
- Whether the fen meadow proposals would have any adverse impact upon the historic interest of the Grade II* listed building at Pakenham Watermill.
- Public rights of way over any new fen meadow created.
- Traffic and highway safety implications for users of the local roads in and around Pakenham.

	Construction noise impact upon neighbouring residential	
	properties."	
	As it stands at the present, the Fen Meadow Strategy does not	
	provide the information to test most or all of the points raised in	
	that list and SCC is not aware of any other documentation from	
	,	
	the Applicant that would provide such information. Therefore the	
	issues raised by SCC and others remain to be tested.	
	The definition of SCC as LLFA is not necessary and indeed	
	unhelpful in this respect.	
iii. wet woodland and other flora and fauna by	Wet woodland is a Suffolk Priority Habitat because it provides	REP1-020
reason of which it is of special interest	diverse conditions which support a wide range of plants,	
	invertebrates, birds and mammals (e.g. Bats) and is threatened	
	by a wide range of factors such as straightforward loss,	
	restoration to other land uses, poor management, water	
	pollution and water abstraction. It should be noted that 3.06 Ha	
	of Wet Woodland habitat will be lost, to be compensated for by	
	0.7 Ha on the EDF Energy Estate and 2.36 Ha on the Fen Meadow	
	Compensation sites. This is equivalent to the amount lost and	
	SCC would expect at least a threefold increase in Ha to	
	compensate.	
iv. Water level monitoring	SCC defers to EA/ NE on this	
Minsmere		,
c. Minsmere – the marsh harrier, including the	SCC defers to NE regarding this species (but we do note that	
proposed HRA	there has been comprehensive provision proposed for this	
	species which can be found hunting across a wide area and range	
	of landscape types, which SCC welcomes).	
Compensatory Measures for the marsh harrier	SCC defers to NE and repeats the comments above.

(for both MDS and ADs) look sensible and proportionate but would like to make the following points:

- Mitigation strategies variously refer to retaining existing vegetation "wherever practical and appropriate", but the emphasis must be that vegetation is cut back or removed only where absolutely essential to deliver the project. It is the first principle of the Ecological Mitigation Hierarchy: Avoid harm.
- Although it is welcome that reference is made to the Institute of Lighting Professionals' Guidelines, again it is phrased "as far as possible" whereas we should expect strict adherence to those ILP Guidelines in order to mitigate disturbance to, e.g., commuting and foraging Bats.
- Reliance is placed on "bat hop overs" to mitigate the impact of severing ecological corridors in, e.g., the
 Sizewell Link Road design principles but it could take many years for trees and shrubs to reach the height and structure necessary to deliver this, almost certainly far longer than the lifespan of a bat in the wild (e.g., a
 Pipistrelle in the wild has a life expectancy of 4-5 years).
- Reference is made to the "temporary loss" of habitat but, referring to the point above, the time necessary for mitigation planting to mature sufficiently is likely to be

	for many years, far longer than the lifespan of the	
	affected animal species.	
	 Many of the sites surveyed for ADs (e.g., the P&R sites) 	
	have recorded farmland bird assemblages feeding,	
	potentially breeding and otherwise using those sites but	
	there is no specific mitigation for these groups (e.g., we	
	would expect Skylark plots).	
	Mitigation and compensation for the loss of the old pits	
	either side of Bridleway 19 has not been included in any	
	mitigation strategies. These are important habitats for	
	songbirds and other arable farmland birds (potentially	
	Schedule 1 species such as Barn Owl as well as foraging	
	Bats).	
	SCC considers that a clear message needs to be given that, although the mitigation strategies are likely to prove beneficial to the long-term conservation of biodiversity, this is very much in the medium (at best) and long term. We are concerned that there will be a substantial loss of habitat for many years while new habitat matures and existing habitat is subject to noise, light and human disturbance during the construction phase.	
	SCC would like to see more thought given to interim conservation and mitigation measures (such as hurdles to replicate hedgerows) and would welcome the Applicant's proposals in this regard.	
f. Other designated sites	Loss of the Suffolk Shingle Beaches CWS with the associated flora (not only through the temporary stockpiling but, once reinstated,	

	to the increased risk of loss through coastal processes,	
	accelerated by the SZC coastal defences).	
	SCC also wishes to have further information about what happens	
	with the Suffolk Shingle CWS in context of revised proposals for	
	HCDF and SCDF. Some more detail on this issue is provided in our	
	deadline 5 submission on the Applicant's response to the LIR.

	It is proposed that watercourse crossings are dealt with by way of	
	portal culverts but these are unlikely to be acceptable to EA	
	· · · · · · · · · · · · · · · · · · ·	
	(bridges are preferred) and, again, monitoring (which is acted	
	upon) is essential to ensure that the ecological corridors are not	
	permanently severed. However, note the points being made	
	under ISH 5 for the issues around the oLEMP, which cover	
	ecology as well as landscape.	
Duties under ss. 40 and 41 Natural Environment and Rural Communities Act 2006		
i. Duties under ss. 40 and 41 Natural Environment	The Section 40 duty to "have regard, so far as is consistent with	
and Rural Communities Act 2006	the proper exercise of those functions, to the purpose of	
	conserving biodiversity" is evidenced by the contributions to this	
	PI process.	
	The Section 41 duty to "list of the living organisms and types of	
	habitat which in the Secretary of State's opinion are of principal	

	importance for the purpose of conserving biodiversity." is evidenced by SCC in the publishing of the lists of Suffolk Priority Species and Habitats and, in addressing S.41 (3)(a) requirement to "further the conservation" of those species and habitats and (b) to"promote the taking by others of such steps" is also evidenced by SCC's engagement in this process and by acknowledging and supporting NE's critical responsibility for headline species and habitats, ESC's position regarding, e.g., European Protected Species (such as Bats) and by SCC drawing attention to, e.g., farmland bird assemblages.	
Letters of no impediment.		
j. The position in relation to Letters of no		
impediment and any Environment Agency comfort		
letters		
	,	
a. HRA, European and other designated sites		
i. Marine Mammals		
ii. Fish, including migratory fish		
iii. Birds - Disturbance/displacement of the red-		
throated diver qualifying feature of the Outer		
Thames Estuary SPA due to vessel		
movements/traffic		
iv. Birds – collision risk		
b. Cooling water system, acoustic fish deterrents,		

c. The securing mechanisms to control impacts on	
marine water quality	
d. Progress update on status of the Water Industry	
National Environment Programme (WINEP) study	
being undertaken by Essex and Suffolk Water	
e. Fisheries, fish stocks, equivalent adult values,	
sabellaria spinosa;
