I write to voice my objection to the proposed Sizewell C.

This is a delicate coastline - Sizewell A and B are on an outcrop but the proposal is to build sizewell C on sand.

This coast is eroding and the timescale for this building and the water it will need have not been adequately costed/ thought through / planned / surveyed.

The survey of the coast and seabed is back-of-the envelope stuff - limited to a short stretch of the coast, and seemingly purposefully obfuscating. Designed to tick the box rather than to properly assess the impact and long term risks of putting this building and this power station here.

The technology you are putting in will be obsolete - the costs including the environmental costs are huge - and unjustifiable. It is going to be a white elephant -

I urge you have the guts to say that this is old technology, the human, environmental and financial costs are too great - and that this is not the right place for the what will be the biggest building site in europe.

Sort out real renewables with some small scale nuclear - this where the money should be invested - this is the future.

Yours sincerely, Thomasin Andrews
