---

Sirs

You will be fully aware of the numerous sound arguments against this project which individually would result in a planning refusal in any objective process. I wish to concentrate on the critical issue.

It is clear that this country is facing a huge energy gap and additional electrical generating capacity is critically required. This project cannot possibly help provide that capacity in the time scale needed. There is not one reactor of this design operating in Europe and possibly not anywhere in the World. In Europe two of those under construction are over ten years late. No further reactors of this design are planned. French and Chinese involvement are problematic. As I write this the French are threatening to cut off electricity to Jersey.

A planning approval would divert valuable resource from projects that with a will would help our energy gap crisis.

I implore you, for the sake of the Nation and for the sake of this local area, to issue a refusal.

Andrew Freese FRICS (retired)
