To whom it may concern,

As a resident of Melton, living closely adjacent to the rail line which it is intended will feed materials to the proposed Sizewell C nuclear new build, i object most robustly to the weakness and imprecision of the planned rail transport programme.

Not only is the number, size and timing of the rains undefined but the level of necessary associated rail track improvement is also not agreed. Neither is there any guarantee that existing passenger services, already poor, will remain unaffected.

I support SZC in principle but definitely not at the expense of degrading the existing poor infrastructure links by overwhelming the present single track line.

Yours sincerely

Stephen Rogers
