Please, please, please, don't allow another nuclear power station to be built at Sizewell!

It will devastate the irreplaceable surrounding wildlife and landscapes; create years of disruption and noise; it won't help solve the immediate climate crisis as it won't be complete for years; it is likely to cost far more than projected budgets; and this type of reactor is inherently untested and potentially unsafe!!

How can we condone leaving nuclear waste for generations to come? There is no realistic plan for dealing with this deadly waste. Furthermore, the Suffolk coast is unstable and eroding rapidly....the nightmare scenarios of flooding and tidal surges are not compatible with building nuclear reactors on this land!

Thanks for your time. I have written many times with my more detailed responses, but the above sums it up.

Good wishes,

Meraylah Allwood
