To whom it may concern

I am a resident in East Suffolk and would like to register my objection to the planning and construction of Sizewell C.

The main basis for this is the length of time it will take to construct, the size and impact of the construction (building a village to build the power station) and most of all the lifetime carbon emissions that the project would cause, during construction and through to decommissioning.

I am also concerned with the risk of nuclear waste, and the long term plans for this in the area.

Furthermore I understand that water supply to the reactor is an issue, and in the part of the country where water supply is already the most carbon intensive this further highlights the high environmental impact Sizewell C will have.

I strongly support clean/green energy mix but do not see nuclear power stations as a part of this due to their short life span vs high carbon impact.

Kind regards
Susanne Conway
