Dear Sirs

I live in a village near Faversham and have very serious concerns about this proposed development:

- Building on a conservation area that supports an abundance of wildlife seems an inappropriate choice relative to other sites that could have been chosen
- This especially true as the area's current vegetation also acts as a natural carbon sink
- More importantly, there is a proposal for the largest Lithium Ion battery installation in the world. This has severe implications for the safety of people living within a radius of many miles of the site. These type of batteries have been shown to spontaneously catch fire in many previous instances around the world. Having so many of them in close proximity has the potential to start a significant chain reaction that could devastate life for miles around. When/if this goes off it will dwarf the Grenfell scandal and I hope everyone responsible for approving it will be held to account
- How necessary are these batteries in the context of them having the ability to kill everyone locally?

Thank you

Tim Philpott
