

# Net Zero Teesside Project

Planning Inspectorate Reference: EN010103

Land at and in the vicinity of the former Redcar Steel Works site, Redcar and in Stockton-on-Tees, Teesside

The Net Zero Teesside Order

Document Reference: 1.2 – Application Guide

The Planning Act 2008

The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 – Regulation 5(2)(q)

Applicants: Net Zero Teesside Power Limited (NZN Power Ltd) & Net Zero North Sea Storage Limited (NZNS Storage Ltd)

Date: February 2025

## GLOSSARY

<b>Abbreviation</b>	<b>Description</b>
APFP Regulations	The Applications: Prescribed Forms and Procedure Regulations 2009.
Applicants	Net Zero Teesside Power Limited and Net Zero North Sea Storage Limited.
Authorised Development	The Net Zero Teesside Project.
BEIS	Department of Business, Energy and Industrial Strategy - a department of the UK Government.
CCUS	Carbon Capture, Usage and Storage - is group of technologies designed to reduce the amount of carbon dioxide (CO <sub>2</sub> ) released into the atmosphere from coal and gas power stations as well as heavy industry including cement and steel production. Once captured, the CO <sub>2</sub> can be either re-used in various products, such as cement or plastics (usage), or stored in geological formations deep underground (storage).
CO <sub>2</sub>	Carbon Dioxide - an inorganic chemical compound with a wide range of commercial uses.
DCLG	Department for Communities and Local Government - a department of the UK Government.
DCO	A Development Consent Order made by the relevant Secretary of State pursuant to The Planning Act 2008 to authorise a Nationally Significant Infrastructure Project. A DCO can incorporate or remove the need for a range of consents which would otherwise be required for a development. A DCO can also include rights of compulsory acquisition.
EIA	Environmental Impact Assessment - a term used for the assessment of environmental consequences (positive or negative) of a plan, policy, program or project prior to the decision to move forward with the proposed action.

EIA Regulations	The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017.
ES	Environmental Statement - a report in which the process and results of an Environment Impact Assessment are documented.
MLWS	Mean Low Water Springs - the height of the mean low water springs is the average height obtained by the two successive low waters during those periods of 24 hours when the range of the tide is at its greatest.
Mt	Million Tonnes - a metric unit of weight.
NMC	Non-material change
NSIP	Nationally Significant Infrastructure Project - defined by the Planning Act 2008 and covering projects relating to energy (including generating stations, electric lines and pipelines); transport (including trunk roads and motorways, airports, harbour facilities, railways and rail freight interchanges); water (dams and reservoirs, and the transfer of water resources); waste water treatment plants and hazardous waste facilities. These projects are only defined as nationally significant if they satisfy a statutory threshold in terms of their scale or effect.
NZNS Storage	Net Zero North Sea Storage Limited - one of the Applicants.
NZT	Net Zero Teesside - the name of the Proposed Development.
NZT Power	Net Zero Teesside Power Limited - one of the Applicants.
Order	The Net Zero Teesside Order - the name of the DCO for the Proposed Development.
PA 2008	The Planning Act 2008 - setting out the legislative regime for Nationally Significant Infrastructure Projects.
PINS	The Planning Inspectorate - an executive agency of the Department for Communities and Local Government responsible for administering DCO applications on behalf of the relevant Secretary of State.
SoS	Secretary of State - the decision maker for DCO applications and head of a UK Government department.
STDC	South Tees Development Corporation - a Mayoral Development Corporation responsible for approximately 400 hectares of land south of the River Tees in the borough of Redcar and Cleveland.

---

## 1.0 INTRODUCTION

### Overview

- 1.1.0 This Application Guide (Document Ref. 1.2) has been prepared on behalf of Net Zero Teesside Power Limited and Net Zero North Sea Storage Limited (the 'Applicants'). It forms part of the application (the 'Application') for a Development Consent Order (a 'DCO'), that was submitted to the Secretary of State (the 'SoS') for Business, Energy and Industrial Strategy ('BEIS') (now Energy Security and Net Zero), under Section 37 of 'The Planning Act 2008' (the 'PA 2008') for the Net Zero Teesside Project.
- 1.1.1 The Application was submitted to the SoS on 19 July 2021 and was accepted for Examination on 16 August 2021. The Examination into the Application closed on 10 November 2022. The Examining Authority submitted its recommendation to the SoS on 10 February 2023.
- 1.1.2 The Net Zero Teesside Order 2024 (S.I. 2024 No. 174) ('the Order' or 'the DCO') was made by the SoS for Energy Security and Net Zero ('DESNZ') on 16 February 2024 and came into force on 11 March 2024. Since the DCO was granted, the Applicants have undertaken an update to this Design and Access Statement ('DAS') to take account of changes sought through a proposed non-material change ('NMC') application pursuant to Section 153 of the PA 2008 and Regulation 4 of 'The Infrastructure Planning (Changes to, and Revocation of, Development Consent Orders).
- 1.1.3 Development consent was granted for the construction, operation and maintenance of the Net Zero Teesside Project, including associated development (together the 'Authorised Development') on land at and in the vicinity of the former Redcar Steel Works site, Redcar and in Stockton-on-Tees, on Teesside (the 'Site'). The former Steel Works site, along with other land required for the Proposed Development, lies within the boundary of the land controlled by the South Tees Development Corporation ('STDC'), which is now known as 'Teesworks'.
- 1.1.4 A DCO is required for the Authorised Development as it falls within the definition and thresholds for a 'Nationally Significant Infrastructure Project' (a 'NSIP') under Sections 14(1)(a) and 15 of the PA 2008, associated development under Section 115(1)(b) and by direction under Sections 35(1) and 35ZA of the same Act.
- 1.1.5 The Authorised Development will be the UK's first commercial scale, full chain Carbon Capture, Usage, and Storage ('CCUS') project and will initially capture up to 4 million tonnes (Mt) of carbon dioxide (CO<sub>2</sub>) emissions per annum. It will comprise a number of elements, including a new gas-fired electricity generating station with post-combustion carbon capture plant; gas, water and electricity connections (for the generating station); a CO<sub>2</sub> pipeline network (a 'gathering network') for collecting CO<sub>2</sub> from a cluster of local industries on Teesside; a CO<sub>2</sub> compressor station (for the compression of the CO<sub>2</sub>) and a CO<sub>2</sub> export pipeline.
- 1.1.6 The CO<sub>2</sub> captured from the electricity generating station and local industries will be compressed and then transported (via the export pipeline) for secure storage within the Endurance saline aquifer located 145 kilometres offshore from Teesside under the North Sea. The transport pipeline has the capacity to carry up to 10Mt of CO<sub>2</sub>

per annum. The Proposed Development will therefore make a significant contribution toward the UK reaching its greenhouse gas emissions target by 2050.

## The Applicants

1.1.7 NZT encompasses proposals to both decarbonise electricity generation and a cluster of carbon intensive industries on Teesside. In line with the CCUS business models published by BEIS in December 2020, there will be separate entities who will be responsible for:

- electricity generation with post-combustion carbon capture (including the gas, water and electricity connections);
- CO<sub>2</sub> gathering (from industrial emitters), CO<sub>2</sub> compression and CO<sub>2</sub> transportation and storage; and
- industrial (including hydrogen production) carbon capture and connections to the CO<sub>2</sub> gathering network.

1.1.8 The entities are set out in **Table 1.1** below.

**Table 1.1 – NZT Entities**

Onshore works scope	Partnership	NZT Entity	Within the scope of the DCO Application?
Electricity generating station with post-combustion carbon capture (including the gas, water and electricity connections)	bp* and Equinor	Net Zero Teesside Power Limited	Yes
CO <sub>2</sub> gathering network, CO <sub>2</sub> compression and the onshore section of CO <sub>2</sub> export pipeline	bp*, Equinor and Total Energies	Net Zero North Sea Storage Limited	Yes
Industrial and hydrogen production carbon capture	Individual industrial emitters	N/A	No

and connection to the CO <sub>2</sub> gathering network			
---	--	--	--

\*Operator on behalf of the relevant Partnership

- 1.1.9 NZT is being promoted by Net Zero Teesside Power Limited ('NZT Power') and Net Zero North Sea Storage Limited ('NZNS Storage'). NZT Power and NZNS Storage (together the Applicants for the purposes of the DCO Application) have been incorporated on behalf of bp as operator of the two Partnerships.
- 1.1.10 The electricity generation with post-combustion carbon capture Partnership comprises bp and Equinor, with bp leading as operator. NZT Power will be responsible for the Authorised Development in so far as it relates to the construction, operation and eventual decommissioning of the electricity generating station together with its carbon capture plant (both within the scope of the DCO as made).
- 1.1.11 The CO<sub>2</sub> gathering network, CO<sub>2</sub> compression and onshore section of CO<sub>2</sub> export pipeline Partnership comprises bp, Equinor and Total Energies, with bp leading as operator. NZNS Storage will be responsible for the Authorised Development in so far as it relates to the construction, operation and eventual decommissioning of the equipment required for the high-pressure compression of CO<sub>2</sub> from the electricity generating station and industrial emitters via the CO<sub>2</sub> gathering network and the onshore section of the CO<sub>2</sub> export pipeline (these are all within the scope of the DCO as made).
- 1.1.12 NZNS Storage will also be responsible for the offshore elements of NZT, comprising the offshore section of the CO<sub>2</sub> export pipeline (below Mean Low Water Springs ('MLWS')) to a suitable offshore geological CO<sub>2</sub> storage site under the North Sea, CO<sub>2</sub> injection wells and associated infrastructure. The offshore elements of NZT (with the exception of the gas and CO<sub>2</sub> pipeline crossings of the River Tees and the water outfall from the electricity generating station) did not form part of the DCO Application.

### What is Carbon Capture, Usage and Storage?

- 1.1.13 Carbon Capture, Usage and Storage ('CCUS') is a process that removes CO<sub>2</sub> emissions at source, for example emissions from a power station or chemical manufacturing installation, and then compresses the CO<sub>2</sub> so that it can be safely transported to secure underground storage sites. It is then injected into layers of solid rock filled with interconnected pores where the CO<sub>2</sub> becomes trapped and locked in place, preventing it from being released into the atmosphere. **Figure 1.1** shows what is involved in the process.

**Figure 1.1 – CCUS Process**

- 1.1.14 The technologies used in CCUS are proven and have been used safely across the world for many years. Storage sites are located several kilometres underground and are subject to stringent tests to ensure that they are geologically suitable. In the UK, it is expected that the storage sites will be located offshore, in areas such as the North Sea.
- 1.1.15 CCUS is one of a number of technologies that are crucial to reducing CO<sub>2</sub> emissions and combatting global warming. The UK Government has committed to achieving net zero in terms of greenhouse gas emissions by 2050. This is a legally binding target.

### The Site

- 1.1.16 The Site lies within the administrative boundaries of both Redcar and Cleveland Borough Council and Stockton-on-Tees Borough Council. It also partly lies within the boundary of the Teesworks area that is controlled by the STDC.
- 1.1.17 Most of the Site lies within the administrative area of Redcar and Cleveland Borough Council, although parts of Site (for the electricity generating station's gas supply connection to the National Transmission System for gas and the CO<sub>2</sub> gathering network) cross the River Tees into the administrative area of Stockton-on-Tees Borough Council. At this location the River Tees is tidal. In addition, there are elements of the Site which extend into South Gare, Coatham Sands and the North Sea. Those sections of the Site that are below MLWS are outside the jurisdiction of either local authority being part of the UK marine area.
- 1.1.18 The Site extends to approximately 245.3 hectares in area. Much of it comprises previously developed (including part of the former Redcar Steel Works Site) and existing industrial land, some of which was reclaimed from the Tees Estuary in the late C19th and during the C20th. The Site is relatively flat and low-lying and sits at a level of between sea level and approximately 9 metres Above Ordnance Datum. The area surrounding the Site is largely characterised by industrial and commercial uses, although there are open areas of land to the north in the form of South Gare and Coatham Sands, which are used for recreational purposes and that are of nature conservation importance.

- 1.1.19 A more detailed description of the Site and its surroundings is provided at Chapter 3 'Description of the Existing Environment' in the Environmental Statement ('ES') Volume I (Document Ref. 6.2) [APP-085].

### The Authorised Development

- 1.1.20 The Authorised Development will work by capturing CO<sub>2</sub> from the electricity generating station in addition to a cluster of local industries on Teesside and transporting it via a CO<sub>2</sub> export pipeline to the Endurance saline aquifer under the North Sea. The Authorised Development will initially capture and transport up to 4Mt of CO<sub>2</sub> per annum, although the CO<sub>2</sub> export pipeline has the capacity to accommodate up to 10Mt of CO<sub>2</sub> per annum thereby allowing for future expansion.
- 1.1.21 The Authorised Development comprises the following elements:
- **Work Number ('Work No.') 1** – a Combined Cycle Gas Turbine electricity generating station with an electrical output of up to 860 megawatts and post-combustion carbon capture plant (the '**Low Carbon Electricity Generating Station**');;
  - **Work No. 2** – natural gas supply connection and Above Ground Installations ('AGIs') (the '**Gas Connection Corridor**');;
  - **Work No. 3** – an electricity grid connection (the '**Electrical Connection**');;
  - **Work No. 4** – water supply connections (the '**Water Supply Connection Corridor**');;
  - **Work No. 5** – a waste water disposal connection (the '**Water Discharge Connection Corridor**');;
  - **Work No. 6** – a CO<sub>2</sub> gathering network (including connections under the tidal River Tees) to collect and transport the captured CO<sub>2</sub> from industrial emitters (the industrial emitters using the gathering network will be responsible for consenting their own carbon capture plant and connections to the gathering network) (the '**CO<sub>2</sub> Gathering Network Corridor**');;
  - **Work No. 7** – a high-pressure CO<sub>2</sub> compressor station to receive and compress the captured CO<sub>2</sub> from the Low Carbon Electricity Generating Station and the CO<sub>2</sub> Gathering Network before it is transported offshore (the '**HP Compressor Station**');;
  - **Work No. 8** – a dense phase CO<sub>2</sub> export pipeline for the onward transport of the captured and compressed CO<sub>2</sub> to the Endurance saline aquifer under the North Sea (the '**CO<sub>2</sub> Export Pipeline**');;
  - **Work No. 9** – temporary construction and laydown areas, including contractor compounds, construction staff welfare and vehicle parking for use during the construction phase of the Authorised Development (the '**Laydown Areas**'); and
  - **Work No. 10** – access and highway improvement works (the '**Access and Highway Works**').

- 1.1.22 The electricity generating station, its post-combustion carbon capture plant and the CO<sub>2</sub> compressor station will be located on part of the STDC Teesworks area (on part of the former Redcar Steel Works Site). The CO<sub>2</sub> export pipeline will also start in this location before heading offshore. The generating station connections and the CO<sub>2</sub> gathering network will require corridors of land within both Redcar and Stockton-on-Tees, including crossings beneath the River Tees.
- 1.1.23 All of the above elements are included in the scope of the DCO Order, with the exception of the CO<sub>2</sub> export pipeline, where only the onshore section of pipeline above MLWS is included. The CO<sub>2</sub> Export Pipeline below MLWS and the CO<sub>2</sub> storage site under the North Sea (the Endurance saline aquifer) are the subject of separate consent and licensing applications, which are supported by an Offshore Environmental Statement.
- 1.1.24 The ancillary development required in connection with and subsidiary to the above elements of the Authorised Development is detailed in Schedule 1 of the DCO Order (Document Ref. 2.3). A more detailed description of the Authorised Development is provided at Schedule 1 'Authorised Development' of the DCO Order (Document Ref. 2.3) and Chapter 4 'The Proposed Development' in ES Volume I (Document Ref. 6.2) **[APP-086]** and the areas within which each of the main elements of the Authorised Development are to be built are denoted by the coloured and hatched areas on the Works Plans (Document Ref. 4.4) **[AS-148 & 149]**.
- 1.1.25 The changes that were made during the DCO Application determination phase came as a result of the change request submitted on 28 April 2022, and accepted into the Examination on 6 May 2022 **[AS-047 to AS-195]**, are described within the ES Addendum (Document Refs. 7.7, 7.8.1 and 7.8.2) **[AS-049, 050 & 051]**. There are three main areas of change to the Proposed Development. These are:
- The selection of a Gas Connection route (Work No. 2A).
  - A reduction in the area of the CO<sub>2</sub> Gathering Network route from the north of the River Tees, across the Tees to the PCC Site (Work No. 6).
  - Updates to the land parcels within the Application Site/Order Limits as a result of further pre-front end engineering design construction assessments and landowner discussions.
- 1.1.26 The above have resulted in a total of 13 changes. These are described in detail at Chapter 2 'Proposed Development Changes' of the ES Addendum, Volume I.
- 1.1.27 The Applicants submitted a further change request at Deadline 6 **[REP6-105]**, which further reduces optionality and the extent of the Order Limits. This was accepted into the Examination on 6 September 2022. The further proposed changes are:
- The selection of the method of crossing the River Tees for the CO<sub>2</sub> Gathering Network (Work No. 6).
  - The selection of the Electrical Connection (Work No. 3A) routeing over the Tees Valley railway line within the Teesworks site.

- A reduction of temporary possession land following progress made during Front End Engineering Design ('FEED') and continued landowner discussions.
- 1.1.28 The above changes are described in detail at Chapter 2 'Proposed Development Changes' of the Second ES Addendum, Volume I (Document Ref. 7.11.1) [REP6-107].
- 1.1.29 The Applicants submitted a third change request at Deadline 12 (Document Ref. 7.13b) [REP12-116]. This was accepted into the Examination on 4 November 2022. The further proposed change was the selection of the option of construction of a new outfall for the discharge of wastewater to Tees Bay (Work No. 5B) and the removal of the option of utilising the existing STDC outfall (Work No. 5A). This change is described in more detailed at Chapter 2 'Proposed Development Change' of the Third ES Addendum, Volume I (Document Ref. 7.15.1) [REP12-118].
- 1.1.30 A fourth change request was submitted on 25 April 2023 in respect of the removal of the Tees Dock Road Access from the Order Limits. The change in respect of the Tees Dock Road Access is described in Document Ref. 7.13c.
- 1.1.31 Following the DCO being formally granted and the continuation of FEED, the Applicants seek to make the following changes (together 'the Proposed Changes') to Schedule 1 'Authorised Development' and Schedule 2 'Requirements Schedule' of the DCO Order through a non-material change ('NMC') Application to the SoS:
- The addition of 'Work No. 6A' which would comprise an Above Ground Installation ('AGI') for the CO<sub>2</sub> gathering network and associated apparatus to be located at Seal Sands and the addition of 'Work No 9G' consisting of a temporary construction laydown area to be located on land adjacent to the new AGI at Work No. 6A. The proposed AGI under Work No. 6A is located within the existing Order Limits, with the proposed temporary laydown area requiring new land to be included within the Order Limits. The temporary laydown is needed to facilitate the construction of the AGI.
  - An extension to the area allocated for Work No. 2B (natural gas AGI) at the CATS Terminal (Seal Sands). This minor expansion of the proposed AGI area for Work No. 2B follows further detailed land discussions with interested parties and is located entirely within the existing Order Limits and within the existing area of Work No. 2A (natural gas pipeline).
  - Within the Power, Capture and Compression ('PCC') Site, the Applicants propose the addition of a new AGI under Work No. 6A and the realignment of the CO<sub>2</sub> gathering network under Work No. 6. Both the new AGI and realigned CO<sub>2</sub> pipeline are located entirely within the existing Order Limits.
  - Areas of land to be added to existing Work No. 3A (electrical connection), including areas both within and outside the existing Order Limits. The proposed additional areas of above ground and underground high voltage ('HV') electrical cabling under Work No. 3A will also include two support structures adjacent to existing bridges over the Tees Valley Line, River Fleet and existing pipelines to support the cables (rather than using the existing bridges as previously specified).

- In association with the Work No. 3A change set out above, the proposed non-material change application also requests a change to Requirement 3(4) of Schedule 2 'Requirements' of the Order, as a means to ensure that details of the two proposed cable support structures are submitted for the approval of the relevant planning authority.

### **The Purpose and Structure of this Document**

- 1.1.32 The purpose of this Application Guide is to list the documents (the 'Application Documents') that make up the Application submitted to the SoS and also those submitted during the pre-examination and examination periods, any documents submitted following the close of the Examination in response to requests for further information and updates from the SoS and also any further changes to the Application.
- 1.1.33 The documents are listed in Section 2 (Table 2.1) of this document.

## 2.0 APPLICATION DOCUMENTS & OTHER DOCUMENTS

- 2.1.1 The Application Documents and other documents have been grouped into appropriate categories and each has been given its own document reference in **Table 2.1** on the following pages.
- 2.1.2 In addition to listing the documents submitted, Table 2.1 also identifies where these have been provided to comply with relevant legislative and policy requirements and guidance. The legislative requirements for DCO applications are principally contained in the PA 2008, The Infrastructure Planning (Applications: Prescribed Forms and Procedures) Regulations 2009 (the 'APFP Regulations') and The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations').
- 2.1.3 Regulation 5 in the APFP Regulations lists the documents that all DCO applications must include. Regulation 5 includes a category (Reg. 5(2)(q)) described as "*any other documents considered necessary to support the application*". Similarly, Regulation 5 (Reg. 5(2)(o)) also allows applicants to submit other plans, drawings and sections which are considered necessary to describe the proposed development. The documents and plans and drawings that have been provided by the Applicants under these categories of Regulation 5 are therefore not statutorily required but are those which it considers are necessary to explain and support the Application.
- 2.1.4 Regulation 6 sets out a number of documents that particular types of DCO application must include. Those relating to power stations and pipelines are relevant to the Proposed Development and include an Electricity Grid Connection Statement and a Gas Connection and Pipelines Statement.
- 2.1.5 The Application submitted for the Proposed Development is considered to comply with the statutory requirements of the PA 2008, the APFP Regulations and the EIA Regulations. Furthermore, the Application complies with the policy requirements under relevant National Policy Statements and applicable SoS and PINS guidance, including, in particular, PINS Advice Note 6 'Preparation and submission of application documents' (December 2020).
- 2.1.6 The documents that have been submitted and amended in association with the NMC application, along with any updates in respect of other documents since that date, are highlighted in yellow in Table 2.1 below. Please note that the document with DCO Doc Ref 3.1b (termed the Second Supplementary Book of Reference in this Application Guide) is named the "Supplemental Book of Reference" for the purposes of the draft Net Zero Teesside Amendment Order 202\* that is provided by the Applicants within this non-material change Application.
