

Now we know more about what you intend to do, to decimate our rural living, including huge machinery, & disruption over the next few years, I pray to God, you have a change of heart, & refuse, large solar panels blotting our landscapes covering over 2500 acres over our fertile crop growing fields. Food security is a premium. Especially now, with the Russia & Ukraine war. You & I, & the British population will need food for sustenance, & for generations to follow. If we don't farm here, where are we getting it from. There already is a world shortage. Solar Yes, but not on life giving land, Install panels on Roof tops etc, on scrub land. Makes sense. Think of our children & grandchildren. I hope by now you have been & viewed our villages. Please don't change them.
