

The need for a specific ISH on Battery Safety was raised already in my PDC-011 listing the points I wished to make at the (resumed) Preliminary Meeting. In the event I was not called to speak in spite of registering to do so but trust that my PDC-011 will suffice. This Representation is made simply to reiterate this need. The large number of questions already put by the ExA on BESS fire safety would appear to suggest that this need is indeed correctly perceived.
