To whom it may confirm

This massively flawed project must not get passed.

I'm not anti solar, but paneling over productive, fertile farm land cannot be a 'green' and food independent solution.

It's not even really about producing energy, it's just a money making scheme. 80% of the income is simply drawing energy off the network at cheap rate and selling it back when needed at a higher rate... Hardly a solution to our energy needs.

This is in addition to all the safety concerns around the construction phase and then the location of the huge batteries and their proximity to our villages.

Please don't pass this awful plan.

Regards

Tim Wood
