You don't often get email from [REDACTED] [Learn why this is important](#)

To whom it may concern.

While most people absolutely back the development of more wind farms the future really should be floating farms further off shore..

However the desperate need for the UK to do more to tackle climate change necessitates Rampion 2. So for me the biggest concern in the environmental impact of pile driven foundations on the acoustic environment in shallow waters.

Best practice for sound pollution and decommissioning are to use screw pile foundations and that should be a requirement in this case.

Regards Jonathan Wood
