Subject: Rampion 2 Offshore Wind Farm Project - from Tim Facer IP 20042904

I am responding to the final stage of the Consultation.

The surveys carried out by RWE and their agents have repeatedly stated that the land at Cratemans Farm (which I own) is poor semi-improved grassland and of no special significance. This has now been completely discredited by the fact that the fields at Cratemans have been included in Natural England's Priority Habitat Inventory.

This alone calls into question the other "surveys" that were purported to have been carried out at Cratemans. Carter Jonas (RWE's agent at the time) stated that the Breeding Birds survey was conducted from a public right of way and did not need to enter our land. This is completely false as a complete survey could not possibly have been carried out on the area in question without leaving public rights of way.

I also question whether a "Ponds" survey was ever undertaken as, according to my notes at the time, nobody arrived at my farm to carry out the survey on the dates arranged.

Again, I would point out that I have still not received definitive plans of the proposed route through my property.

My home is a Grade II listed property surrounded by what is now classified as priority habitat by Natural England which RWE seem intent to completely disrupt and destroy.

Once again I think that RWE and their Agents have been totally incompetent, unprofessional and economical with the truth in their dealings with me.

Yours faithfully

Tim Facer
