I thought that this was all carried out on planning consent for the developer ,but i am pleased to have the opportunity to once again to put forward my objection.

A National wide renewal needs to be brought forward to review the ability to take much needed farmland to feed ourselves directly or indirectly be taken to install these so called "farms" to sweeten the notion of "all jolly good for the environment propaganda.

When ,if the developer has finalised the development i find it appalling to learn that local authorities will have to clear out and away the waste infrastructure after the service life of the instruments of solar panels. This will it seems to be a 40 year span of use. This to me strikes as being on the same level of Fly /Tipping

Much has been said for the obvious ,but since the start of surveys by the developer it can be established they cannot be trusted to keep to the planning consent rules even at this early stage..

I have had notice than excavation transport ,i.e. HGV tipper lorries have not been keeping to approved routes ,but driving through Rosliston village ,in the opposite direction to the approved route.

PLEASE FIND YOURSELVES TO HAVE THESE SOLAR FARMS(?) PUT IN PLACES THAT ARE MORE ENVIRONMENTAL SUITABLE IN SUCH A SMALL COUNTRY AS OURS .. I UNDERSTAND OTHER COUNTRIES COMBINE SITES THAT CORRESSPOND WITH EXISTING DEVELOPMENTS .THERE MUST BE THOUSAND OF ACRES OF ROOFSPACES FOR INSTANCE. AS I SURGESTED A COMPLETE REVIEW IS NEEDED FOR THE INTERESTS OF ALL NOT JUST THE CONVIENIENCE OF THE DEVELOPER

Yours

David Llewellyn . [redacted]
