

**Representative Viewpoint 19 (Left) - Junction of rural lane (Main Street) and Essendine Road near the marker post**

**Existing View:**

This viewpoint is representative of motorists travelling along the Essendine Road near the marker posts and junction of the rural lane (Main Street). The existing view is generally contained to the junction by the roadside hedgerows. Glimpse views into the southern parcel of the Solar PV Site would be perceptible through a gappy hedgerow section to the east of the viewpoint.

### Operational Phase Effects:

The proposed southern parcel of the Solar PV Site to the east of the Essendine Road junction would be perceptible through the hedgerow gaps in the winter months without leaf coverage. The Solar PV Site would be setback from the hedgerow boundary and the existing hedgerow managed for improved density and visual screening. The scale of effect

would be **small (adverse)** at year 1 reducing to **negligible (adverse)** by year 15.

For viewpoint locations refer to Figure 6.6: Zone of Theoretical Visibility (ZTV) Study, Representative Viewpoints and Illustrative Viewpoints.
