1. INTRODUCTION

1.1. PURPOSE OF THE STATEMENT OF COMMON GROUND

- 1.1.1. A Statement of Common Ground (SoCG) is a written statement produced during the application process for a Development Consent Order (DCO) and is prepared jointly by the applicant and another party.
- 1.1.2. Paragraph 007 of the Ministry for Housing Communities and Local Government (MHCLG) Guidance entitled 'Planning Act 2008: Examination stage for Nationally Significant Infrastructure Projects' (30 April 2024) (hereafter referred to as MHCLG Guidance)¹ describes a SoCG as follows:
 - "A Statement of Common Ground (SoCG) is a written statement prepared jointly by the applicant and another party or parties, setting out any matters on which they agree, or indeed disagree. A SoCG helps to ensure that the evidence at the examination focuses on the material differences between the main parties and therefore makes best use of the lines of questioning pursued by the Examining Authority".
- 1.1.3. This SoCG has been prepared in accordance with the MHCLG Guidance¹. The aim of a SoCG is to assist the Examining Authority in examining the DCO by providing an understanding of the status of discussions or negotiations between the applicant and the other party. The effective use of SoCG aid an efficient examination process.
- 1.1.4. A SoCG may be submitted to the Planning Inspectorate either prior to the start of, or during, an Examination and is updated as necessary, or as requested, during the Examination.
- 1.1.5. This SoCG has been prepared by WSP UK Limited on behalf of Cory Environmental Holdings Limited (the Applicant). It accompanies the application for a DCO (the DCO Application) in relation to the Cory Decarbonisation Project in Bexley, London. The DCO Application has been made in accordance with Section 37 of the Planning Act 2008 (as amended) and submitted to the Secretary of State ('the SoS') for Energy Security and Net Zero (DESNZ).
- 1.1.6. The DCO, if granted, would authorise the construction, operation, maintenance and decommissioning of the Cory Decarbonisation Project (the 'Proposed Scheme'). The Proposed Scheme is to be located at Norman Road, Belvedere in the London Borough of Bexley (LBB) (National Grid Reference/NGR 549572, 180512).
- 1.1.7. The Proposed Scheme is described in **Chapter 2: Site and the Proposed Scheme** (Volume 1) of the **ES** (Planning Inspectorate Reference APP-051) and includes:
 - The Carbon Capture Facility (including its associated supporting plant and ancillary infrastructure);
 - A Proposed Jetty to allow for export of the captured carbon by vessel;
 - A Mitigation and Enhancement Area;

- Temporary Construction Compounds; and
- Utilities Connections and Site Access Works.

1.2. INTRODUCTION TO ENVIRONMENT AGENCY

- 1.2.1. This SoCG has been prepared between the Environment Agency and the Applicant (jointly referred to as 'the Parties') in relation to the DCO Application.
- 1.2.2. The Environment Agency is a regulator and statutory consultee as prescribed under Schedule 1 of the Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2009 (as amended). All proposed applications which are likely to affect land in England/Wales must consult the Environment Agency.
- 1.2.3. Advice and consultation responses are typically provided as part of non-statutory consultation and engagement, in response to the Environmental Impact Assessment (EIA) Scoping Report², as part of statutory consultation (including on the Preliminary Environmental Information Report (PEIR)³, engagement on the development of the Environmental Statement, Flood Risk Assessment, Coastal Modelling, Water Framework Directive Assessment and participation in the Examination process.

1.3. STATEMENT OF COMMON GROUND STRUCTURE

- 1.3.1. Section 2 summarises all engagement to date of relevance to this SoCG and Section 3 details whether matters are Agreed, Not Agreed or Under Discussion between the Parties.
- 1.3.2. In respect of matters relevant to the Proposed Scheme but not referred to in this SoCG, the Environment Agency has no further comments to make at this point. It may have further or additional comments to make, particularly if further information about the Proposed Scheme becomes available.
- 1.3.3. The SoCG is a document that will evolve during the Examination stage and will conclude with a version that confirms the Parties' positions on relevant matters before the close of the Examination.

2. RECORD OF ENGAGEMENT

2.1.1. A summary of the meetings and correspondence that has taken place between the Applicant and Environment Agency in relation to the Proposed Scheme is outlined in **Table 2-1** below. There has been email correspondence between the Parties to discuss the sharing of information, arrangement of meetings and to share comment on draft documentation, but this table reflects the key meetings and emails of note that have taken place between the Parties.

Table 2-1: Schedule of Meetings and Correspondence during the Pre-Application Stage

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
16 th February 2023	Meeting	Initial introductory consultation meeting to present the Proposed Scheme. The following key topics were discussed:
		The Proposed Jetty, including pontoon mitigation options;
		Construction dredging;
		Existing statutory flood defences;
		Sediment modelling; and
		Wave wash impacts on the shoreline.
13 th April 2023	Meeting	Consultation meeting to discuss the proposed marine works, the relationship between the Proposed Scheme and the statutory flood defences, the design life of the marine components of the Proposed Scheme and the proposed methodology for the marine biodiversity assessment, the flood risk assessment, the coastal modelling assessment and sediment processes assessment.

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
		The Environment Agency advised that it holds the Environment Agency's Marsh Dykes model, which is the best representation of flood risk in the area, and that this can be provided. The Environment Agency also advised that it is in the process of updating the Thames Estuary 2100 extreme water levels within the River Thames, and will subsequently update the associated breach modelling, although it was noted that both elements may not be available prior to submission of the application for development consent.
20 th April 2023	Email	An updated coastal modelling assessment methodology and sediment processes assessment methodology was provided by the Applicant.
21 st April 2023	Email	Local flood model data requests were made via email following the meeting on the 13 th April 2023 for the Environment Agency's Marsh Dykes model, the Thames Estuary Breach Assessment (2018) and Thames Estuary 2100 extreme water levels. These were provided by the Environment Agency.
10 th May 2023	Email	The following data requests were received from the Environment Agency: The Environment Agency's Marsh Dykes model; The Thames Estuary Breach Assessment (2018); and Thames Estuary 2100 extreme water levels.
26 th May 2023	Scoping Opinion	The Planning Inspectorate's EIA Scoping Opinion ⁴ contained comments from the Environment Agency. Those comments and the Applicant's response are shown in Appendix 4-2: Scoping Opinion Response (Volume 3) (APP-076) .

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
15 th September 2023	Meeting	Meeting with the area relevant planning specialists to confirm what data requests were outstanding and to whom the requests for data had been sent. Follow up actions were assigned to both parties.
20 th September 2023	Meeting	Meeting to discuss the data available and the methodology for Appendix 11-2 : Flood Risk Assessment (Volume 3) (APP-107) and the methodology for the coastal modelling and sediment processes assessment. The Environment Agency agreed that sediment modelling was required for the Proposed Scheme. The Environment Agency confirmed that they have no concerns regarding sedimentation of the Great Breach Outfall, vessel wash, intertidal habitats, and impacts on the statutory flood defences.
27 th October 2023	Email	The Applicant contacted the Environment Agency to seek pertinent information including contamination issues, water quality, landfill records and remedial works relating within the Study Area.
31 st October 2023	Email	Response from the Environment Agency stating that the above enquiry had been forwarded to the Environment Agency Customers and Engagements Team.
14 th November 2023	Email	The Environment Agency provided the following guidance to the Applicant on the timings of works in relation to fish species: "If percussive piling is necessary in the water, piling should be carried out outside the main periods of fish migrations. In the River Thames, this is between April to September inclusive, whilst for sites close to spawning areas, this period is extended to March to September inclusive."

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
29 th November 2023	Section 42 Response Letter (email)	The Environment Agency's Section 42 response letter made comments on the following topics of the PEIR ³ : Flood risk; Potential contamination and groundwater protection; Biodiversity; Water Framework Directive; and Wastewater treatment.
1 st December 2023	Meeting	Meeting to discuss the overall scope of Appendix 11-1: Water Framework Directive Assessment (Volume 3) (APP-106), which included fish migration periods and dredging method.
13 th December 2023	Meeting	Specific meeting to discuss the water quality scope of Appendix 11-1: Water Framework Directive Assessment (Volume 3) (APP-106) , which included sampling, guidance on dredging and the WFD Screening and Scoping Report.
15 th December 2023	Email	Response from the Environment Agency regarding pertinent environmental information for the Study Area.
14 th December 2023	Meeting	Meeting to discuss the preliminary findings of the modelling assessment and sediment processes assessment undertaken. The key outcomes:

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
		 The Environment Agency asked for more evidence to be included in the application for a development consent on:
		- The as built or surface water drainage strategies for Riverside 1 and 2; and
		 The distance from the proposed works to the Great Breach Pumping Station and more detail on the cross sections of the watercourse.
		 The Environment Agency confirmed agreement with the approach of the modelling assessment and sediment processes assessment undertaken.
20 th December 2023	Email	The email from the Environment Agency provided baseline water quality data and additional guidance on the assessment of water quality within the River Thames to inform Appendix 11-1: Water Framework Directive Assessment (Volume 3) (APP-106).
22 nd December 2023	Email	The email provided technical feedback from the Environment Agency on the WFD Screening and Scoping report submitted for comment (since superseded by Appendix 11-1: Water Framework Directive Assessment (Volume 3) (APP-106).
14 th June 2024	Letter	The Environment Agency submitted their Relevant Representation (RR) (RR-065). The following topics were covered in: Flood risk; Land raising; Breach modelling; Great Breach Pumping Station;

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
		Sediment modelling;
		Terrestrial ecology;
		Water Framework Directive;
		Environmental permits;
		Survey data;
		Groundwater protection;
		Permitting and waste; and
		Wastewater discharge.
8 th August 2024	Meeting	A meeting was held to discuss the Environment Agency's RR (RR-065) covering the following components:
		Sediment contamination;
		Breach modelling locations;
		Offsite increases in flood risk; and
		The Environment Agency site visit (14th August 2024).
14 th August 2024	Meeting	An in-person meeting was held at the Site with the Environment Agency, the Applicant and the WSP Water team to discuss Flood Risk and the Environment Agency's RR (RR-065). Specific items of discussion included the following:
		Land raising;
		Mitigation measures;

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
		Breach modelling;
		Buffer zones to watercourses; and
		River Thames barrier.
		The following items were also discussed briefly although were not the focus of the meeting:
		Biodiversity Net Gain;
		Permits;
		Potable water;
		Groundwater; and
		Protective provisions.
9 th September	Meeting	A meeting was held with the Applicant and the Environment Agency to discuss sedimentation and coastal processes with the following topics discussed:
2024		 An overview of the information used to inform the coastal processes assessment and supporting modelling;
		Modelling for the Proposed Jetty location;
		Sedimentation at the Great Breach Outfall location;
		Protective provisions;
		Thames Estuary 2100 Plan; and
		 Follow up discussion from 14th August Flood Risk meeting (as above).

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
12 th September 2024	Email	The Environment Agency previously suggested the removal or enhancement of a rock revetment as an ecological enhancement at a nearby location, Riverside Way, during consultation. This could create an opportunity to deliver intertidal Biodiversity Net Gain (BNG) for the Cory Decarbonisation Project through several interventions, such as removing the rock revetment to restore intertidal mudflat habitat or enhancing the revetment with artificial rock pools and/or planting. The Applicant requested further details on the Environment Agency's aspirations for this location to explore the feasibility of using it for intertidal BNG. The Applicant also inquired about any other intertidal enhancement schemes in the area.
13 th September 2024	Email	The Applicant provided the Cory Thames Estuary Breach Model for the Environment Agency's review.
16 th September 2024	Email	The Applicant sent the minutes from the Sedimentation Meeting held on 9 th September 2024 and included a draft version of the Environment Agency's SoCG, requesting their review and signature.
17 th September 2024	Email	The Environment Agency responded to the Applicant's email, indicating that, due to limited internal resources, they require additional time to review and sign the SoCG. They also requested access to the Proposed Scheme's Design Principles and Design Code for review prior to signing the SoCG.

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
19 th September 2024	Email	The Applicant provided the Proposed Scheme's submitted version of the Design Principals and Code document.
7 th October 2024	Email	The Applicant informed the Environment Agency of their plan to update certain submitted DCO Application documents through a Notification of Change Letter to the Planning Inspectorate, a link to these was provided, intended to support the Environment Agency's preparation for the examination.
21 st October	Email	The Environment Agency acknowledged receipt of the Cory Thames Breach Model email from the Applicant from the 13 th September 2024. The Environment Agency stated that a hydraulic modelling report is typically required for flood model reviews and requested the Applicant to submit this report. Additionally, they highlighted the need for sensitivity testing within the model. The Environment Agency further requested that the Applicant provide a justification for the approach to sensitivity testing and outline this justification within the hydraulic modelling report.
30 th October 2024	Email	In response to the sedimentation meeting held on 9 September 2024, the Environment Agency raised concerns regarding the Applicant's modelling choice as a valid assessment of coastal change. Additionally, the Environment Agency requested clarification on the location and potential ecological enhancement of the rock revetment between the mudflat and tidal defence at a nearby site. They have also requested a meeting to discuss the Design Principles in relation to the Estuary Edges and the Thames Estuary Partnership.

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
31 st October 2024	Email	The Applicant submitted Annex B of the Flood Risk Assessment, which contains the Cory Thames Estuary Breach Model report, to the Environment Agency and provided a detailed explanation of the decision regarding sensitivity testing. Sensitivity testing, typically used to assess a model's responsiveness to parameters when observational data is unavailable, was not conducted in this case. Since the breach model is designed to represent residual risk from a standardised breach scenario without calibration data, altering tidal boundary conditions or the model's Manning's "n" roughness would likely not affect the overall flood risk assessment, given the model's large domain, short breach duration, and standardised breach width. Therefore, sensitivity testing was considered unnecessary in this context, as it would not further enhance the understanding of potential breach impacts, even when factoring in other uncertainties, such as the probability of storm surge events.
5 th November 2024	Email	 The Applicant responded to the email received by the Environment Agency on 30th October which: Notified the Environment Agency of the Applicant's intent to respond to their questions regarding sediment flux. Clarified in regard to rock revetment, this measure (including location) amongst other options will be considered during the detailed design and the post consent BNG process. The Applicant provided a link to Appendix 7-1: Biodiversity Net Gain Report (Volume 3) of the Environmental Statement (APP-109) for further information. Notified the Environment Agency that an issue had been identified with the Environment Agency's Marsh Dykes Model that has been used to inform the

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
		breach assessment for the Proposed Scheme. The Applicant notified the Environment Agency that they are currently reviewing the model.
19 th November 2024	Email	In response to the Applicant submitting Annex B of the Flood Risk Assessment, the Environment Agency requested the following additional information to carry out their review: • Mike+ project set-up file to show how all the scenarios are linked together; and • Description of boundary condition information. The Environment Agency also requested an update on the problem with their Marsh Dykes flood model identified by the Applicant.
25 th November 2024	Email	 The Applicant responded to the email received by the Environment Agency on 19th November which: Provided the Environment Agency with the text file included within the model package which details the different scenarios and the relevant input files that were run as part of the assessment, because the model was built using MIKE21 there are no Mike+ Project set-up files. Identified that a description of the boundary condition information Is provided in Annex B of Appendix 11-2 Flood Risk Assessment (AS-023) which provides details of the breach modelling methodology, and the approach taken was agreed with the Environment Agency during a meeting on the 13th April 2023 (meeting minutes were attached to the email). Notified the Environment Agency that the Environment Agency's Marsh Dykes model contains run files connected only to the baseline model. The run files and

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
		results were not being generated from the correct breach scenarios. The Applicant is currently reviewing the results and will be in touch to discuss any findings.
26 th November 2024	Email	 The Environment Agency responded to the email from the Applicant on 25th November which: Clarified that their original comment was about the availability of the data rather than justification that the 2018 dataset was better. Requested further clarity on the Applicant's response regarding the issues identified with the Marsh Dykes model.
26 th November	Letter	The Applicant received the Environment Agency's Written Representation (RR-065) as part of the DCO examination deadline one. The written representation covered the following topics: Flood risk; WFD water quality; Terrestrial ecology; Environmental permits; and Protective provisions.
27 th November 2024	Email	The Applicant responded to the Environment Agency's email on 26 th November and provided clarification on the following points:

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
		 The Applicant confirmed they were referring to the Environment Agency's Marsh Dykes Model in their email sent on 25th November 2024.
		 The Applicant confirmed it is the breach assessment in the Environment Agency's Marsh Dykes Model that they have noticed anomalies with and are currently reviewing.
		 The Applicant has used the Environment Agency's Marsh Dykes Model in two ways: 1) to assess fluvial and pluvial flood risks, and 2) to assess residual risk in the event of breach at the Great Breach and Green Levels pumping stations.
		 The model shared with the Environment Agency to date is WSP's Thames Estuary MIKE21 breach model.
		 The Applicant informed the Environment Agency that they have not yet sent the Environment Agency's Marsh Dykes Model that was updated to include the Proposed Scheme.
12 th December 2024	Email	The Applicant submitted the Coastal Processes Modelling Technical Note to support Appendix 11-4: Coastal Modelling Studies (Volume 3) of the Environmental Statement (APP-109). This is in response to comments received from the Environment Agency regarding sedimentation at the Great Breach Pumping Station outfall.
		The Coastal Processes Modelling Technical was also submitted into the examination as Appendix A of the Applicant's Response to Interested Parties' Deadline 1 Submissions (REP1-019).

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
20 th December 2024	Email	The Applicant notified the Environment Agency that there were a couple of questions in the Examining Authorities First Written Questions that have been assigned to them.
23 rd December 2024	Email	 The Environment Agency responded to the Applicant's email on 25th November 2024 providing comments and questions in relation to the Applicant's Breach Flood Modelling and Flood Risk Assessment. The following key points were discussed: Models referenced to justify worst case scenario. Missing files required to run the models. Incomplete geometry in the MIKE21 model. The need for additional clarification on the basis for the timings used for the breaches in the MIKE21 model. Confirmation on why breach location 8 was not modelled and why Breach 7 has been modelled differently. Further clarification on the design water levels, design ground and defence crest levels based on the modelling results. Concerns over the Applicant's assertion that the changes in the floodplain are minimal.
24 th December 2024	Email	The Environment Agency responded to the Applicant's email on 12 th December 2024 and confirmed that they had received the consultation from PINS and an email from the Case Officer listing the Environment Agency specific questions. The Environment

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
		Agency confirmed that they had contacted their technical specialists in relation to the questions.
06 th January 2025	Email	The Applicant notified the Environment Agency that they are in the process of preparing a response to the comments and questions raised in their email on 23 rd December 2024.
17 th January 2025	Letter	The Applicant submitted their Responses to Interested Parties' Deadline 2 Submissions (REP3-034) and the Applicant's Response to Examining Authority's First Written Questions (REP3-029) which included Appendix C: Flood Risk Technical Note- Breach Assessment Scenarios (REP3-035). The Environment Agency submitted their Response to the Examining Authority's First Written Questions (REP3-037) and the Standard Protective Provisions Including Explanatory Advice Note (REP3-036) at Deadline 3. The Applicant provided responses to the questions submitted by the Environment Agency within The Applicant's Response to Interested Parties' Deadline 3 Submissions (as submitted at Deadline 4).
20 th January 2025	Meeting	A meeting was held with the Environment Agency, on the 20 th January 2025, to discuss the Applicant's proposed approach, understanding and interpretation of the Environment Agency's key guidance and the process for an environmental permit specific to the Carbon Capture Facility, Riverside 1 and Riverside 2.
23 rd January 2025	Email	The Applicant submitted a written response to the questions raised by the Environment Agency in their email on 23 rd December. The Applicant also provided

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
		the Environment Agency with a link to Appendix C: Flood Risk Technical Note- Breach Assessment Scenarios (REP3-035) which was submitted at Deadline 3.
28 th January 2025	Email	The Applicant requested a meeting with the Environment Agency discuss the outstanding matters under discussion regarding flood risk and the sediment sampling.
29 th January 2025	Email	The Applicant submitted the Updated Flood Risk Technical Note: Further Breach Modelling and Platform Scenarios Methodology and provided a link to download the files for the Marsk Dykes and Thames Estuary Breach Models.
10 th February 2025	Email	The Applicant reviewed the Standard Protective Provisions Including Explanatory Advice Note (REP3-036) submitted at Deadline 3 by the Environment Agency and provided comments on them, which focussed on their interaction with the particulars of this Proposed Scheme. The Applicant submitted two documents for the Environment Agency's review:
		 The updated protective provisions that the Applicant proposes to include in the Draft DCO to be submitted at Deadline 4. A document showing the redline between the Applicant's updated protective provisions and the Environment Agency's recently updated protective provisions.
12 th February 2025	Issue Specific Hearing 2 (ISH2)	During ISH2 a representative from the Environment Agency, noted a point that a limiting clause is unacceptable, and they will complete their review and provide comments. The representative separately raised a concern about disapplied legislation, in particular the Metropolis Management Act, arguing that the obligation on the land owner to maintain the flood defences should not be extinguished. The

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
		Applicant explained that a response to the disapplication would be submitted at Deadline 4 and the Applicant would also respond on the Thames Barrier Act.
13 th February 2025	Meeting	A meeting was held to discuss outstanding matters in relation to flood risk. The Environment Agency were pleased that the Applicant has assessed the need for equipment and the buildings to be protected from flooding. It was agreed that the protection of the elements of the Proposed Development vulnerable to flooding is not dependant on raising the development platform above the existing ground levels, with localised protection via raised plinth, bunding or appropriate flood resilient structure to be provided, where required. The Environment Agency's Evidence and Risk Team are reviewing the raw outputs of the breach modelling data before providing further comment.
13 th February 2025	Email	Following the meeting on 13 th February 2025, the Environment Agency requested the depth (m) and water surface (m AOD) results as grid files for each of the breach locations new scenarios.
14 th February 2025	Technical Note	The Applicant provided a response to the questions asked by the Examining Authority in the Rule 17 Letter – Request for Further Information – Applicant and Environment Agency (PD-013) within the Applicant's Response to the Examining Authorities Rule 17 Letter – Request for Further Information – Applicant and Environment Agency (AS-087).
14 th February 2025	Letter	The Environment Agency sent the Applicant a copy their response (Environment Agency's Response to the Rule 17 Letter (AS-088)) to the questions asked by the

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
		Examining Authority within the Rule 17 Letter – Request for Further Information – Applicant and Environment Agency (PD-013).
19 th February 2025	Meeting	A meeting was held to discuss outstanding matters in relation to additional sediment sampling and the Appendix 11-1: Water Framework Directive Assessment of the Environmental Statement (Volume 3) (APP-106).
		The key topics discussed included:
		 Description of sampling and extent of samples taken. Results of the additional sediment sampling (December 2024). Discussion of assessment methodology.
19 th February 2025	Email	The Environment Agency have provided the Applicant with a contact for obtaining the baseline Thames middle water quality data (annual averages) and a suggested example methodology for the analysis of the sediment sample results.
20 th February 2025	Email	The Environment Agency provided the Applicant with the baseline water quality data for the Thames Middle Transitional Water Body.
20 th February 2025	Email	The Applicant sent the additional data files to the Environment Agency, as requested during the meeting on 13 th February 2025.
21 st February 2025	Email	The Environment Agency confirmed the Evidence and Risk Team successfully downloaded the additional flood risk data files sent by Applicant on 20 th February 2025.

Date	Form of Correspondence	Summary of Matters Dealt with in Correspondence/ Meeting
27 th February 2025	Email	The Applicant requested clarification from the Environment Agency over the source of baseline data provided on 20 th February 2025. The Environment Agency addressed the query and provided the Applicant with the source of the data on 27 th February 2025.
05 th March 2025	Email	The Applicant sent a copy of the meeting minutes from the flood risk (13 th February 2025) and WFD (19 th February 2025) meetings to the Environment Agency.
05 th March 2025	Email	The Applicant sent a copy of the Sediment Sampling Technical Note to the Environment Agency for review by the 12 th March.
10 th March 2025	Meeting	The Applicant had a meeting with the Environment Agency to discuss future meetings and the approach for the remaining matters under discussions. The Applicant also enquired when the Environment Agency's review of the flood risk modelling and Sediment Sampling Technical Note would be complete.
20 th March 2025	Email	The Environment Agency provided an update on their review of following matters: Sediment Sampling Technical Note (agreed); Protective provisions (under review); Modelling results (agreed); and Submission 4 responses and buffer zone technical note (under review).
21 st March 2025	Meeting	The Applicant had a meeting with the Environment Agency to discuss the remaining matters under discussions (notably, ground raising and buffer zones).

2.1.2. It is agreed **Table 2-1** is an accurate record of the key meetings and consultation undertaken between the Applicant and Environment Agency in relation to the issues addressed in this SoCG as at the date of this SoCG.

3. ISSUES

3.1. TERMINOLOGY

- 3.1.1. In the tables in this section of this SoCG:
 - "Agreed" indicates where the issue has been resolved;
 - "Under Discussion" indicates where these points are the subject of ongoing discussion wherever possible to resolve, or refine, the extent of disagreement between the Parties; and
 - "Not Agreed" indicates a final position of the Parties that is Not Agreed.
- 3.1.2. It can be taken that any matters not specifically referred to in this section of this SoCG are not of material interest or relevance to the Interested Parties representation and therefore have not been considered in this document.

3.2. MATTERS AGREED

3.2.1. **Table 3-1** below details the matters Agreed between the Environment Agency and the Applicant.

Table 3-1: Matters Agreed

Date	Form of Correspondence	Details of Matters Agreed
13 th April 2023	Meeting	The Environment Agency agreed: The marine biodiversity assessment methodology and the marine biodiversity sampling methodology/locations; and That the Biodiversity Net Gain assessment shall focus on the intertidal area of the Proposed Scheme and not the subtidal area.

Date	Form of Correspondence	Details of Matters Agreed
20 th September 2023	Meeting	The Environment Agency agreed that the Thames Estuary Breach Assessment (2018) was the best available data for use within and informing the breach assessment aspect of Appendix 11-2 : Flood Risk Assessment (Volume 3) (APP-107) .
1 st December 2023	Meeting	The Environment Agency agreed that the mudflat does not need to be assessed at a waterbody level (WFD) but could be assessed generally within Appendix 11-1: Water Framework Directive Assessment (Volume 3) (APP-106).
13 th December 2023	Meeting	 The Environment Agency agreed with: The methodology regarding water quality for Appendix 11-1: Water Framework Directive Assessment (Volume 3) (APP-106); and That the mean low water volume of sediment for the load in the existing waterbody could be used in the WFD assessment.
14 th December 2023	Meeting	 The Environment Agency agreed with: The methodology and approach undertaken for the sediment modelling for Appendix 11-4: Coastal Modelling (Volume 3) (APP-109); and The Environment Agency's Marsh Dykes model could be used as part of the breach assessment in Appendix 11-2: Flood Risk Assessment (Volume 3) (APP-107).
14 th August 2024	Meeting	The following matters were agreed:

Date	Form of Correspondence	Details of Matters Agreed
		Land raising:
		 Appendix 11-2: Flood Risk Assessment (Volume 3) (APP-107) presents a precautionary and likely worst-case scenario, and that lowering of proposed development levels may reduce the residual impacts currently predicted.
		 Land raising will be reviewed during the detailed design to potentially reduce platform levels and freeboard based on the vulnerability of different aspects of the Proposed Scheme to flood risk. This will be secured as a design principle in an update to the Design Principles and Design Code (APP-047).
		 In considering flood non-core aspects of the Proposed Scheme may be considered suitable to flood or have a lower standard of protection in the event of flood defence breach.
		Mitigation measures:
		 The flood risk impacts predicted in Appendix 11-2: Flood Risk Assessment (Volume 3) (APP-107) occur during a residual risk event in the event of failure of the River Thames flood defences, and assume that the existing pumping stations are not operational.
		 That there is no known guidance on what would be considered an acceptable or unacceptable risk or increase in flood levels during a residual risk event.
		Groundwater:
		No further discussion on groundwater are required.

Date	Form of Correspondence	Details of Matters Agreed
		Permitting: Discussions will begin in relation to the operational permit for the Proposed Scheme.
9 th September 2024	Meeting	It was agreed that the use of the Order limits for flood storage as part of the T2100 plan is something that will need to be resolved post consent as the Environment Agency continues to develop its optioneering for what is brought forward as part of that plan. It was agreed that the Applicant will be removing Great Breach Pumping Station from the Order limits (plot 1-122), in its September submission to the ExA, which the Environment Agency welcomed.
17 th January 2025	Letter	The Environment Agency confirmed in their response to the Examining Authority's First Written Questions (REP3-037), that they are satisfied (based on Appendix A: Coastal Processes Technical Note of the Applicant's Response to Interested Parties' Deadline 1 Submissions (REP1-019)) that the sediment modelling presents a reasonable assessment of change. It was agreed that the coastal process model was satisfactory, including the modelling assumptions. The worst case scenario for the Great Breach Outfall was considered realistic and accepted, with further consultation expected during the detailed design phase. The Environment Agency confimed that they are no longer concerned about sedimentation in front of the Great Breach outfall as a result of the Proposed Scheme.

Date	Form of Correspondence	Details of Matters Agreed
19 th February 2025	Meeting	The Environment Agency confirmed that a Technical Note to present the Applicant's findings of the December 2024 sediment sampling, and the information requested by the Environment Agency, would be acceptable.
10 th March 2025	Call	The Environment Agency confirmed that the mitigation measures, with particular reference to habitats, including Water Vole habitat are appropriate.
20 th March 2025	Email	The Environment Agency confirmed that they have reviewed the Sediment Sampling Technical Note and are content that the Proposed Scheme is WFD compliant for water quality.
		The Environment Agency's Evidence and Risk Team have reviewed the raw outputs of the breach modelling data and are satisfied that the model is fit for purpose as a comparison of the change based on the development platform scenarios presented in Appendix C: Flood Risk Technical Note of the Applicant's Response to Examining Authority's First Written Questions (REP3-035).
21 st March 2025	Meeting, Email	The wording of the design principle included in the Design Principles and Design Code (as updated alongside this submission) that sets out the approach to minimising ground raising is agreed, whereby:
		"DC_CCF 1.24 The CCF will have a maximum platform level of 1.3m AOD to the north of the Thames Water Access Road, and a level of 1.5m AOD to the south of the Thames Water Access Road."

Date	Form of Correspondence	Details of Matters Agreed
		It is noted that the Applicant has an aspiration to reduce the height of the development as far as is reasonably practicable during the detailed design.
	The wording of the design principle included in the Design Principles and Design Code (as updated alongside this submission) that sets out the approach to buffer zones is agreed, whereby:	
		"DP_PL 1.9 Allow for a minimum 5m offset, up to 8m or greater where practicable, from the top of bank on existing retained watercourses to allow for maintenance, to protect habitats and for the delivery of flood compensation. The exact dimension for offset to be established during detailed design pursuant to Appendix 11-2: Flood Risk Assessment of the Environmental Statement (Volume 1), responding to location specific constraints and giving consideration to achieving the LaBARDS, operational requirements, and process safety for the CCF."
		The Environment Agency have expressed a keen interested in understanding the detailed design (post DCO) and as such the Applicant is willing to have a meeting every two months to discuss the evolving detailed design (including platform levels, equipment functions, buffer zones and set backs).

3.3. MATTERS UNDER DISCUSSION

3.3.1. **Table 3-2** details the Matters Under Discussion between the Environment Agency and the Applicant.

Table 3-2: Matters Under Discussion

Date	Form of Correspondence	Details of Matters Under Discussion
10 th February 2025	Email ISH2 Email	The Applicant has considered the Protective Provisions submitted at Deadline 3 by the Environment Agency and provided comments on them, focussed on their interaction with the particulars of this Proposed Scheme.
12 th February 20 th March 2025		During ISH2 a representative from the Environment Agency, noted that a limiting clause in the revised protective provisions is unacceptable and they will provide further comments. The representative raised a further point about disapplied legislation, in particular the Metropolis Management Act that the positive obligation on the landowner to maintain the flood defences should not be extinguished. The Applicant has responded on this matter and on the Thames Barrier Act Deadline 4 (see Written Summary of the Applicant's Oral Submission at ISH2).
		The updated Protective Provisions are currently with the Environment Agency's legal team for review.

3.4. MATTERS NOT AGREED

3.4.1. No matters are currently definitively Not Agreed between the Environment Agency and the Applicant.
