

Dear Sir/Madam,

Letter of Support: Cory Decarbonisation Project

I am writing to express my support for Cory's proposed carbon capture project. This innovative initiative promises significant benefits for the environment and, if approved, will play a crucial role in supporting the decarbonisation efforts of the United Kingdom and the development of a carbon dioxide shipping market.

The proposed project will capture carbon dioxide emissions from Cory's Riverside 1 and Riverside 2 energy from waste (EfW) facilities and transport it for permanent storage in the depleted Viking gas fields in the North Sea. Approximately 1.4 million tonnes of CO₂ will be captured a year, marking a significant contribution to the UK's net zero targets. It also represents an investment of c. £1 billion in the UK's low carbon infrastructure.

An important component of this project is the proposed use of a shipping solution to transport the captured carbon dioxide for storage. The development of non-pipeline transportation solutions will provide a vital decarbonisation pathway for emitters which do not have access to a gas pipeline, as well as opening up opportunities for CO₂ imports into the UK.

Yours sincerely,
