Subject: Off shore wind turbine farm: Morecambe Bay.

You don't often get email from [REDACTED]

My ref no is:

20053107

Sirs.

May I make a considered plea on how FUTILE it would be to establish this well meaning yet ill considered massive Wind Turbine farm in Morecambe Bay.

Whilst I couldn't agree more with the grotesque under investment over DECADES by governments various, proffering useless short sightedness in the power sector, the current government have been put into a PANIC to establish power plants to satisfy our future needs.

Yes, yes yes, we need huge investments NOW to merely catch up with future requirements. It is NOT to late. Nuclear power MUST be put to the top of the agender. Both big stations, possibly 8 brand new ones, AND the new latest Small Modular Reactors, SMR s. must with urgency, be built, installed and activated. The likes of BEA Systems, and similar BRITISH companies, who incidently still posses the brightest and cleverist scientits, engineers and technicians in the World should surely be able to build and supply this new technology.

These, combined with our existing power plants are without DOUBT the future. Big investment should now be pouring into these future power plants and NOT into wasteful UNRELIABLE Wind Farms. Massive photo voltaic light cell farms are a much better interim than off shore WFs. Not to mention, having the highest RELIABLE tides on the planet, tidel flow power.

I wonder if our current government knows, just how much power is required by a SAi, Super Artificial Inteligences hub, to run none stop! I don't either, but I do know that it is HUGE. Where is that going to come from if not nuclear power??

Far more thought has to go into our future power requirements and just exactly how that power is going to reach us. A lot of strategically placed SMRs would alleviate the pressure put on the National Grid.

In summing up: the proposed Wind Turbine Farm off the Fylde coast by Morgan and Morecambe, would not only be a scandalce waste of money, but it is UNNECESSARY, not wanted, hugely disruptive to thousands of people, BUT short sighted. This investment could be much better spent in the overall development of the nuclear industry of Great Britain.

What ever happened to BNFL???

OH!!!Bye the way, what happens at DRAX is also a scandal. Importing treated wood, by the THOUSANDS of tons from Canada is WORSE than locally sourced COAL from Yorkshire and Nottinghamshire.

The goverment and all the faceless advisers and hangers on should, yet again hang their heads in shame!!

Rex Hodgson

PLEASE PASS THIS ON TO THE APPROPRIATE DEPARTMENTS AND RELEVANT PEOPLE
