

There is new information to show that the developer has confirmed that the high-pressure gas pipeline that runs alongside the proposed battery storage compound is live. This is revealed very late in the Examination and raises questions about the ability of the developer to carry out due diligence. There are also implications of locating a 100MW BESS alongside nationally significant gas infrastructure. For example who is liable when the inevitable fire breaks out, takes out the battery power station and the supply of energy back to the Little Barford Power Station.
