

i would offer, that after viewing the digital survey, I consider that this does not give a true picture of the landscape and the impact that the solar farm development would have on the PROW access through the site and the surrounding area of PROWs which interlink through it.

People do not walk through an area with their eyes stuck to the ground in front of them, as it has been stated by many on previous occasions it is the wide sweeping panoramas from and towards the Riseley Wolds that would be lost forever. I still feel very strongly that the Examining Authority should visit the area with members of the local community and not rely on a deceptive view as shown by the digital survey
