

We have now had two huge ground mounted solar projects approved in the West Lindsey area and are waiting on a decision for a third. There appears to have been no taking into account of Cumulative Impact on any of the decisions made so far and the passing of a 3rd and 4th scheme would be disastrous for the local community. There are already huge amounts of anxiety that the local community is suffering and the toll on peoples health, both physical and mental, is growing every day. This whole decision making process takes a long time and as a result the local community is subjected to huge amounts of uncertainty which in turn generates a huge amount of stress. This stress and anxiety will only get worse if more schemes are approved and will become intolerable once these schemes are deployed. These schemes are unnecessary, inefficient and avoidable.
