

The impact on health during construction, for example low level noise and pollution from heavy lorries, increased traffic being within the vicinity of prolonged work. The size of this will affect mental health with the impact of a low level noise, equipment being the height of buildings, visually it will be overwhelming, a security risk for fires from BESS units and the risk of smoke contamination a fire would bring.

I would not be staying in the area for the above reasons, so loss to local economy. Having the bess units to store and transfer to grid when needed does not make for sustainable or green energy it should be available at the point of use. I.e roofs

The impact on nature of nesting birds and birds seeing reflections in the sunlight and flying into them. this is farmland where generations have worked to benefit the ecosystem.

What is the plan when they become obsolete we are seeing technology such as this advance quickly.

For the size of the scheme and extraordinary expense if the sun don't come out then there will be little benefit.
