Good afternoon

I am writing to expand on my initial representation on the Tillbridge Solar Project, and hope I am within the extended timescale.

I am hugely concerned at the report produced for this project, by the applicant, regarding the impact of such projects on the health and well-being of people who live next to them. Their report states that there is no evidence of any impact.

I wish to know;-

1. Who wrote the report and what level of health specialisms did they have?
2. Keeping in mind there is no equivalent in scale or density of solar installation in the UK or Europe when taken as 1 of 4 applications planned for within a 6 mile radius, who exactly did they ask? Where did they get their research information from? Who are the people who were surveyed and where do they live?
3. When was the research done and was it from a comparable installation?

I wish to request that a Health Issue specific hearing is held to ensure that the impact on those that live in the catchment area of Tillbridge Solar project is heard and understood.

Many thanks

Carol Montgomery
