To who it may concern

I wish to reiterate my reasons why I feel that this application is totally inappropriate

The reasons for my rejection of this huge development are the irresponsible decommissioning of huge amounts of active farmland that bolster the UK's food security, the loss of valuable wildlife habitat, the massive change to the area when including the other huge solar developments planned for the local area and local communities having to live in the middle of a solar desert.

The dangers of mass battery storage close to communities with their much publicised fire dangers.

The choice of mass solar for a source of mass electricity production due to their well known inefficiencies due to their inability to produce in low light and nighttime periods is wholly wrong to sacrifice precious farmland.

I ask you to very carefully consider your decision before committing to the wanton destruction of a precious resource that provides for our great nation.

Kindest regards

Mark Wardle
