

I want to express my opposition to this application for a solar farm. This project will remove thousands of acres of arable land used for food growing. Our current situation eegarding importing foods is beyond sustainable due to portation taxes and the damage to the climate transporting goods. This prime land needs to be used for its primary purpose not to make a quick profit. We have plenty of buildings, warehouses and car parks that can be used for solar panels. Allowing the solar panels to be installed will change our natural eco system forever, damaging the land Our nature desperately needs for many generations to come.
