---

Mr [REDACTED]  
Interested Party Ref 20049893

1, In reference to the applicants reply to my observation of involvement of Canadian Solar involvement within this application.

REP 4-046 - submission by applicant details that there is no involvement with the company.

Please find attached numerous documents detailing Canadian Solar as being involved from Companies House, Website etc.

I have also raised the question of the integrity of Canadian Solar in reference to the Uyghurs people and there human rights being in question. I have included a letter from the Houses Of Commons that discusses this topic.

I've also found within the current SoCG document (between 7000 acres & Applicant) which states that Recurrent is a subsidiary of Canadian Solar- found in 1.2 of SoCG

Should you agree with my observations what would be your actions in dealing with this, this has been raised on several occasions and dismissed as untrue.

2, Footpath - between Glentworth and Harpwell

I am unable to locate any further information on this within the Deadline 5 data.

I hope this item has not fallen off the radar as the loss would totally isolate the village in progressing north on foot. Walking along Middle street is not an option due to traffic speed, visibility and no dedicated footpath.

3, I see that another session on health & welfare was not required which was naturally very disappointing especially since the applicant failed to deliver any content (appreciate the circumstances however an applicant this size could have overcome this)  
Therefore, I have spent hours on the phone taking to the senior health and wellbeing organisations I now firmly believe that this area has been "skipped over" and due diligence in this area has not occurred.

Having discussed what had been provided by the applicant and the scale of the development(s) I was advised that a fully detailed health impact assessment should be required conducted by the relevant external bodies.

Appreciate your time.
