

I wish to comment on the proximity of the proposed solar farm north of Cassington. ICOMOS have detailed that this area should be omitted. There is no justification for siting solar panels in this area. It is too close to settlements in the village of Cassington. Being a resident of Cassington, I am fully aware of how these solar panels will be visible from the village. There is insufficient mitigation in this area and the land here is undulating. In summary, I strongly oppose the scale of this solar farm. It will have a negative impact on the landscape and will worsen the risk of flooding. I fully support the need for sustainable green energy but there are other options, and other solar farms, that together will achieve our net zero goal.
