

I am concerned that at this late stage in the application the developers (PVDP) have failed to provide sufficient information on the undernoted issues and as such the Secretary of State will not have adequate evidence on which to take an informed decision:

- Scientific evidence regarding increased flood risk due to panel run-off or regarding flood zones on the southern site.
- Safety issues at London Oxford Airport.
- Proof of their assertion that they aren't taking productive land out of food production.
- Comprehensive plans regarding decommissioning
- A definitive cable route through Eynsham and across the Thames
- Justify how "Community Food Growing" areas would benefit local communities and why this commercial enterprise is preferred to the currently successful agricultural enterprise.
- Details of the funding for the project
- Details regarding the Nat Grid substation, 3rd party battery storage and cumulative impacts
