

Dear Planning Inspectorate,

I strongly believe that we need clean energy and appreciate considered political action to this objective.

However I do not believe that the Botley West Solar Farm application is acceptable. Photovolt Development for SolarFive Ltd have not addressed concerns during the consultation but in the final analysis the ground area of this scheme is inappropriately too large, far too large. I say this sincerely because for everyone's well being we need to balance how we use our environment. We require land for food production, for developing green energy and for open space, hospitable to wildlife and people. The application fails to provide this balance. Timothy Massey.
