Subject: Botley West Solar - rejection

Hello,

This has been going on, and on, for so long now and I still seriously think it should be **rejected**.

The whole process has been badly thought out, badly handled and badly timed.

The developers are now asking for further time to respond to the enquiries queries, but appear to have made no effort to respond in a timely manner. This is outrageous! They've had months!

There has been no significant alteration to their original plan and they have not responded to any of the community input on how it will affect the environment, nature, communities and people!

Their funding is deeply question[REDACTED] and concerns about this have been ignored.

Out of concern for food security (most of the area is productive farmland) as well as energy security, the foreign (possibly Russian?) funding for a major energy infrastructure installation is problematic.

I'm sure you've heard all this before, but none of it has been seriously addressed.

Yours, in hope that the application will be rejected on all the grounds for concern above,

Tessa Hammond.
