

In Response to 6.3.6.2
Reference Plan 6.4.6.4 REV 5
Property #44

During the Examination hearing I did request removal of the panels to the south of Plains Lane (E20) duly noted thank you , as this provides a safe evacuation route on foot in the event of a fire

However my request to remove panels to the west of anchor drain (E 19) has not been met ? Given the proximity of the panels to my property and the prevailing south westerly / westerly winds and the tinder dry vegetation conditions of late, these form an unacceptable fire risk to my property and livelihood

I must now also request removal of panels from (E 2) to a minimum distance of 200 meters from my northern boundary , to form an effective fire break

Why 200 meters? 200 meters is Industry Standard Best Practice Advise except in EXEPTIONAL CIRCUMSTANCES?

For the record my main access to the property and for any emergency service vehicles is from the A18

Access from low levels bank via the poultry farm is very limited & certainly not suitable for emergency service vehicles

A simple site visit would immediately verify the above facts

Also please note I still have not had any direct interaction from RWE or there representatives which I find utterly reprehensible & no doubt indicative of what kind of neighbours they could make
