

This application should be refused. 4200 acres of good food producing land and already thousands of acres more applications submitted in this area. Our National food security is at risk. Lincolnshire is a food producing county. Short sighted to risk depending on other countries for our food. The Government has said they will ban panels made by slave labour so ban it. Noise, extra traffic on narrow country roads, dust and pollution while construction takes place would seriously affect safety, commuting and flow of traffic. In the UK in winter there is so little sun and days are short. Build small nuclear plants instead of polluting our fields with concrete, steel and glass. Who would decommission the infrastructure? Where are the guarantees? What is the benefit to Lincolnshire? Are the companies from the UK? Why are we supporting the Chinese economy. All too much too quickly. If this HAS to happen, wait until the panels can be uk made and not have cut off switches. Better still, invest in Nuclear.
