

I am really concerned on the impact of the proposed project upon the area that I live. We purchased our Rural property and it was sold by the land owners on that basis. The irrigated agricultural land around here is some of the best most versatile land in the country and should be used for arable crops not the mounting of industrial Solar developments, These should be placed on building, Carparks etc and not on our productive farm land. I am also concerned regarding impact of flooding from such developers on an aquifer and also potential contamination from mass battery storage.
