

I think the Government are not thinking policies out on reaching net zero. Instead of solar farms, which are denying the population of prime produce which can be grown on the land. Ample buildings, such as warehouses have vast roof ares to accommodate solar panels. The battery storage areas are a blot on the landscape and from the info I have read, these are produced in China, which undermines our security. There is also the fire hazard and not enough research has been carried out when they catch fire. Like all batteries at the end of life, what is the cost and have we the expertise to recycle
