

Security & Risk. On June 2nd 2025 the Strategic Defence Review 2025 was published. In this document it specifically calls out the significant risk to National Infrastructure. As a result it can not be deemed sensible to have Springwell close to high powered fuel Lines, close proximity to 2 significant MOD Facilities and also there is a significant heightened risk that any BESS facility could be targeted by cybersecurity threats. All of this places the communities impacted by Springwell at a huge risk.
