

Dear Sir/Madam, I write to express my concerns over the proposed industrial development of Springwell Solar and EDF Energy in the close proximity of our home, despite active consultation from the very first announcement of the project by Blankney Estates then Springwell the project still has not taken our well being into consideration in the placement of the panels and the positioning relative to our properties [REDACTED], I hope you saw that for yourselves on your recent visit to the area.

I have many concerns not least :-

- 1) The potential contamination to the Lincolnshire Aquifer which rises here, the impact on drainage and water environmental management in the area.
- 2) Landscape & Visuals, especially the lack of full disclosure and misleading representation of marketing material by Springwell.
- 3) Covering our open plan fertile farmland in security fences and CCTV.
- 3) BESS risks. safety, and environmental impact.
- 4) Best use of BMV irrigated farmland!

I feel that this type of solar should be put on either poor agricultural land and preferably on rooftops or on other industrial land not on prime best most versatile irrigated productive farm land.
