

As a household in close proximity to the boundary of the proposed project, I am concerned that the impact on the local area has not been adequately assessed, including but not limited to protection of wildlife and protected species (e.g badgers, bats), watercourses and flood risk over the life span of the project, fire risk and mitigation, visual impact due to the topography, particularly on heritage assets such as Kyme Tower- the views of which will be interrupted by solar panels and has not been adequately assessed/explored and surveyed. Cumulative impacts from other large scale projects in the area have not been properly considered, loss of BMV farmland is excessive when there are alternatives proposed with closer proximity to the connection at bicker which would mean less cable route disruption too, and use of more appropriately lower grade land. I am dissatisfied in that beacon fen have not fully interacted with local residents such as myself, after requests for consultation and discussion have been ignored. There are a number of residents in close proximity e.g gashes barn, which will be significantly adversely affected by the project. Construction harms and disruption have also been inadequately considered or mitigated against.
