

We have lived in Botolph Claydon for over 28years

We came to this quiet beautiful village to enjoy all the amenities of rural life . Walking in open fields enjoying the abundance of nature ,looking at the Stars without light pollution enjoying the health benefits of a close knit community . Now our way of life is being eroded

1st by overdevelopment of housing then HS2 East west rail a massive incinerator. A mega prison . And now this insane scheme put solar panels battery storage and build new power station on our beloved countryside.

Our lives are already being badly impacted with an increase in road traffic constant road closures heavy Lorries trying to negotiate our narrow roads destroying the road surfaces and the verges .taking down hedges and trees and destroying wild life habitats and our farmland

We all know that this is the last country that should be relying on solar as its main source of energy.

We feel nobody is really listening to our concerns about the loss of farmland and rural jobs food security

The risk of fire associated with Battery storage

Toxic fumes .leaking of toxins into the soil and water system . The noise associated with construction and the erection of High fences security cameras lights adding light pollution.

Complete destruction of our wild life .and natural habitats .

The difficulty we have now with negotiating the roads having to deal with heavy traffic /road closures unsafe road surfaces is already causing us a huge amount of stress. Having to allow ourselves extra journey time .to negotiate these problems on a daily basis .

The only people who are benefiting from this project are a few rich people and a French and Chinese energy company.

Please see sense and stop Rosefield Solar power station . Destroying our countryside for ever .
