

Once again I cannot stress how strongly I object to the planned Rosefield Solar farm. To reduce the area of productive farmland at a time when we need to be as self-sufficient as possible makes no sense. To pass on the ridiculously expensive task of recycling vast quantities of solar panels when they reach the end of their life to our children is criminal. This form of renewable energy should be kept to a minimum - and kept out of our fields. These panels belong on roofs, on industrial units, new builds and warehouses - and the fact that the new huge car park at Winslow station was designed without a solar roof beggars belief. Far better would be a compromise of wind turbines in the fields along with solar panels on roofs. The area around Calvert and the Claydons has already been horrendously disrupted by HS2 and East West Rail causing terrible damage to vegetation and wildlife, never mind the road closures and potholes, and to have to suffer yet more disruption is nothing short of cruel. As suggested above, there are other ways of creating renewable energy without covering our green and pleasant land in black plastic.
