

This planning application is yet another potential blight on a local landscape that has already been impacted by HS2, East/West Rail and the future prison build which is precisely the reason that is driving families like mine to seek to leave this county entirely. We are severely impacted each and every day by road closures, deteriorating road surfaces, dust and noise pollution not to mention the adverse impact it has had on the once beautiful local farm and country environment, which was the whole reason we moved to raise a family over 13yrs ago. This particulate plan fails to address concerns of the need to place this proposed storage facility and solar farm here and not on the numerous brownfield sites across the county such as industrial estate roofs or other areas which would be easier to develop overall. There is no discernable benefit to the local community at large in any shape or form other than yet more destruction of the countryside and further years of unlivable construction on our doorstep. I would welcome any prospective local government official to come and live here for a week and understand just how much disruption, added expense and frustration is felt by residents across the Claydons today and for the past 3yrs in particular with many more years to come due to the white elephant project that is HS2 let alone something else like the Solarfarm and concurrent BESS project. This cannot be allowed to be approved just because there is an unrealistic government target to hit.
