

This project is oversized and unsuitable for the location. The infrastructure of the surrounding villages are already damaged by HS2 and EW railway and cannot take any more development in this area. We need farm land in the UK to become more food self sufficient, rather than using top agricultural land for this project. The BESS facility which will be required for the solar energy is another cause for concern as recent similar facilities have caught fire. This particularly worrying for this rural location, where fire rescue services are located many miles away and are being reduced in this area. I object to this proposed development for these reasons.
