

I would like to object to the application as a Resident of the Claydons. This area has already been devastated by the construction of HS2, and the construction of East West Rail.

The proposed construction of the Rose field solar farm and the BESS battery units, and the new proposed electricity sub station, plus the new prison at Edgctt will cause enormous upheaval from the damage to the roads, disruption of local traffic, the noise pollution and light pollution to this agricultural land.and community. Not to mention the effect on the flora and fauna of our villages.

The potential risk of the Battery Units due to fire and river pollution is also a serious concern., and possible air pollution. These proposed planning applications must be refused
