

The proposed site is rural agricultural land working with nature to supply food, homes and respite for numerous animals, birds, flora and people. Our way of life will be forever changed for the worse if this site is built. It will destroy animal's habitats and many plants used for food, shelter and animal housing as well as capturing carbon which is what plants do. It will destroy our rural way of life with the decimation of our narrow lanes, our walking paths and the sanctity of the English countryside. You make laws with consent of the people you serve and for the good of the people you serve. This monstrous site with the dangerous fire prone BESS containers, the acres of panels, surveillance equipment etc will cause, noise pollution, visual pollution, a permanent danger of fire and the destruction of our roads which can not handle the heavy vehicle traffic.

The cumulative effect of HS2 and East/West Rail not to mention the proposed BESS megasite at Rookery Farm in Granborough or the expansion of the substation in East Claydon is already too much for our rural area to bear. We have already had car breakdowns and bike crashes due to massive potholes caused by industrial vehicles working on these sites. We struggle to navigate our lives when roads are constantly being closed and access to our destinations become very difficult to manoeuvre. We have also had near misses when cycling and running from heavy lorries who shouldn't be allowed on our small lanes.

The social contract has always been we pay taxes in order to fund projects for the public good. We have trusted you as our servants to make these decisions for the good of us the people and our countryside which includes the flora, fauna and our cultural landscapes. You have broken this contract with the building of these monstrous and ineffective sites against the will of the people who live there and for the good of the investors of the companies building them- if this were truly about safe, independent energy, you have built small modular nuclear reactors, let drilling in the North Sea continue and outfit solar panels on buildings and car parks.

If you truly cared about green energy, you would be building these solar and battery sites on brownfield land.

The biggest joke is we are forced to pay for it through our taxes as these companies are given enormous subsidies from the public purse.

If Rosefield goes through, I know democracy is well and truly dead.
